

 **Speedglas™**
Welding Safety

3M™ Speedglas™ Welding Safety Catalogue 2022

The right equipment for each job

3M Science. Applied to life.™

One of the most important lessons we have learned over the last 40 years is that no two welders are the same.

Do you
have
the right
equipment
for the
job?

Gear equal to your goals

Running in the forest or on ice. Climbing a new route.
Flying on a dirt bike. Reaching new levels in everything you do.

Every successful activity starts with a clear mental picture of your goals. And the gear you'll need to obtain those goals.

You picture yourself in the activity: What are the conditions? Is it cold and dry, or hot and humid? Quiet or

loud? Clear, dusty, or smoky? What's coming at you: snow? rocks? sparks?

Then you visualise yourself using your gear to keep your body in the correct position, perfecting your technique while staying strong and comfortable.

And you will know when you've selected the right equipment for each activity. You're confident. Relaxed. In control. Harsh conditions will not distract you. And you'll feel the pride that comes with intense, purposeful focus.

If every welder is different, how do we listen to them all?

Whether it's a formal survey or just our everyday conversations with welders, we listen closely to their everyday challenges.

Listening to welders for decades, we've collected a lot of needs, pain points, and "It would be great to have..." comments.

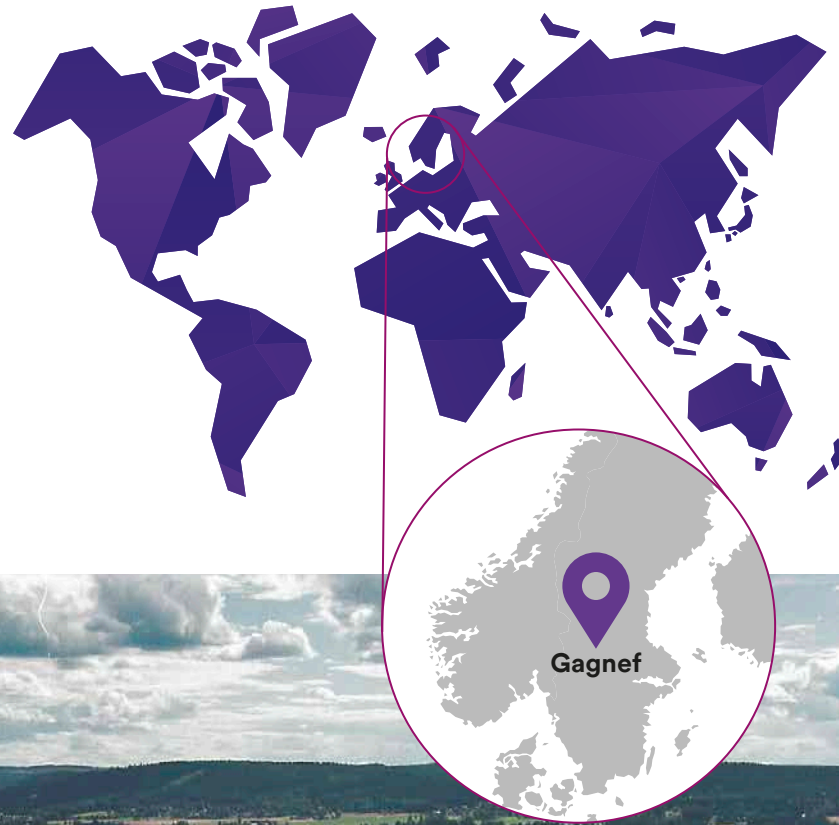

Welder feedback helps us develop products for the future that can help increase productivity, comfort and protection. Our prototypes are field tested by professional welders. From their input, we make iterations until we have a high-performing offering.

This approach creates high user satisfaction and a clear way forward as we launch well-received products, like the G5-01 and G5-02. Thank you, welders, for lending us your voice.

3M Welding Centre of Excellence

Hundreds of thousands of times each day, welders all over the world rely on their 3M™ Speedglas™ products to achieve their best welding performance. A result of our close cooperation with welders, safety engineers and ergonomic specialists to constantly improve the performance and comfort of our products.

40

Over 40 years ago we turned the world of welding on its head by introducing the auto-darkening welding filter.

Our Welding Lab in Gagnef, Sweden has 25 employees dedicated to making 3M your #1 supplier of welding PPE for improved productivity and profitability.

Constantly improving how the welder sees

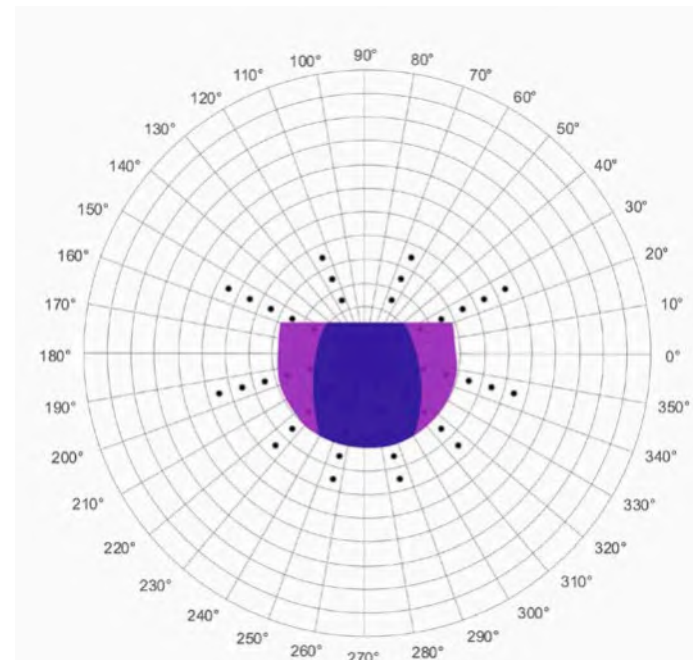

To make consistently great welds, you need the best available view. Our optical and engineering experts focus on the welder's viewing experience – driven by these fundamental questions.

How to optimise the field of view?

In our survey of professional welders, their clear preference was a 2-to-1 aspect ratio for ADFs. But the only way to achieve a wider view without making the helmet itself wider was by inventing a curved ADF: the 3M™ Speedglas™ Welding Helmet G5-02.

“We tested – and rejected – curved ADFs made with plastic substrates,” says Stefan Henriksson, 3M Welding Eye & Face Product Manager.

“We could not find anything that outperformed glass. The real challenge then became how to make the curved ADF. It took us years to design our one-of-a-kind, custom-engineered manufacturing machines. The reaction from welders to the curved filter has been overwhelming positive.”

Using an instrument called an apertometer, we can measure the actual view angles both eyes can see through a welding filter. The blue field shows the 9100XXi filter (previously our widest). The purple field shows the G5-02 filter.

How to increase viewing contrast and comfort?

Everyone literally sees things slightly differently than anyone else. (For proof of this, just think about how you may have argued with others about colour settings on a shared TV or computer display.)

So we experimented with different colour tones for the dark state of a prototype ADF. We discovered that, broadly speaking, welders had three different colour preferences – natural, cool, and warm tones – based on which colour had the best contrast and most comfort for their eyes. The result is our 3M™ Speedglas™ Welding Filter G5-01VC (“VC” for Variable Colour).

How to further refine overall optical clarity?

Since our beginning, this goal has been a core driver for our innovations. “We’re constantly exploring new optical technologies that we can leverage to the welder’s advantage,” says Kristina Magnusson, Senior Optics Specialist at the 3M Welding Centre of Excellence.

“Because we make many of our own welding filter components, we can readily test and transfer new technologies, as well as better control the entire manufacturing process.”

Our latest achievement in optical clarity is the 3M™ Speedglas™ Welding Helmet G5-02. Designed with high precision TIG welding in mind, the G5-02 provides our finest optics ever, due in part to a “glass pack” that’s 1/3 as thick as our thinnest flat ADF.

A more natural light state

See your welds in a new light, with more contrast and natural-looking colours – as demonstrated in these photos. 3M™ Speedglas™ Natural Colour Technology may allow you to see your weld pool more accurately. And read surfaces better. Plus you can better discern coloured machine controls and displays while looking through the 3M™ Speedglas™ NC-Technology. It's a major improvement for viewing your work and your surroundings compared to conventional ADFs.

The difference is easy to see. Yes, the light state is still shade 3! But what you see through the filter appears lighter, more detailed and colourful. In fact, the improved welding filter optics can make your entire viewing experience feel more natural.

Sample competitor's filter shade 3

Dark state 8 at variable colour level C

3M™ Speedglas™ Welding Filter G5-01VC

Which colour tone works best for you?

To provide even better view and control of your weld puddle we now introduce the 3M™ Speedglas™ Variable Colour Technology: you get to choose between natural (A), cool (B) or warm (C) tones for your dark state. You determine which colour tone provides the best viewing contrast for your welds, and the most comfort for your eyes.

Scan this
code to see
how it works!

Why curved?

We gave professional welders prototypes of helmets with different aperture sizes. Their favorite aperture size was the curved, 2-to-1 aspect ratio we used for designing the G5-02 ADF. A wider view was much higher rated than a taller view.

And the only way to get wider views without making the helmet wider is by inventing a curved filter.

**100% wider
ADF field of view**

Get wider views in a slimmer helmet

Previously, you had to compromise: either a slim helmet or a wide view. With the curved G5-02 ADF, there are no compromises.

Flat ADF in a slim helmet means the ADF can't be wide.

Expanded field of view with a flat ADF requires a wider helmet.

A curved ADF can give you a wider total field of view in a slim helmet.

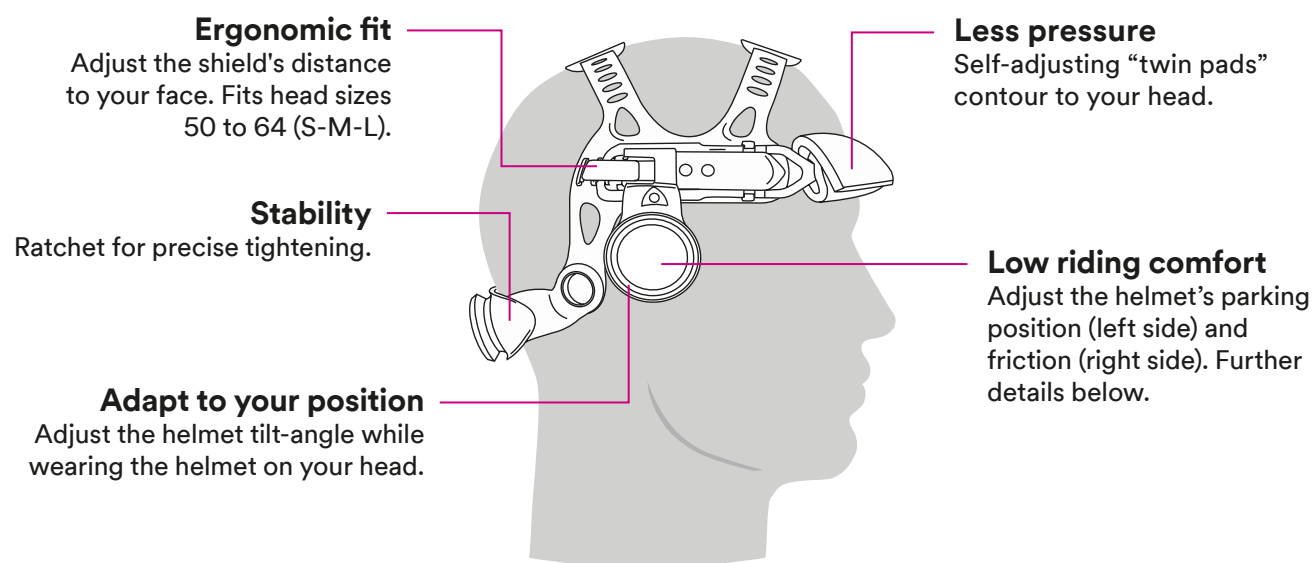

Greatly reduce distracting reflections

The combination of the curved welding filter and a slimmer helmet reduces "rear view" reflections and other distracting glare inside the helmet.

3M™ Speedglas™ Welding Helmets 9100-series

Tailor to fit your personal preferences

With the 9100 headband, we've carefully avoided sensitive areas of the head using self-adjusting twin pads for the forehead band, multiple crown straps and a low ratchet attachment. By better contouring it around your head, our headband doesn't need to be overly tight to be comfortably secure.

We designed the 9100 helmet to "nest" down low, close to the headband, when raised. So you don't need to tighten the headband as much.

The helmet's smooth up-and-down pivot action can be locked in the up position – a light pull lowers the helmet back down again.

DROPS AS YOU LIKE

Drop-friction is adjusted on the wearer's righthand side:

Turn the righthand knob clockwise to increase (or counterclockwise to decrease) the effort needed to lower down the shield.

STABILITY WHEN RAISED

Helmet parking grip is adjusted on the wearer's lefthand side:

Turn the lefthand knob clockwise to increase (or counterclockwise to decrease) how tightly the shield is held in the raised "parked" position.

3M™ Speedglas™ Welding Helmet G5-01

Control the source and direction of your airflow

For more control over your comfort, the innovative G5-01 helmet duct system let you direct the airflow to either your face or your visor, or somewhere in between. You can even adjust the amount of air coming from the helmet's top outlet versus its two side outlets, or choose a blend of both.

All airflow adjustments can be made while you're wearing the helmet – continuously maintaining your eye, face and respiratory protection.

An all-new face seal features a locking toggle designed for fast, secure adjustments. Two new tabs make it easier to lift the seal over your glasses. And installation channels on the helmet speed the removal and replacement of the seal.

Highest safety class for powered air systems

Designed for heavy-duty, high-amperage welding and grinding, the G5-01 helmet connects to the 3M™ Adflo™ Powered Air Purifying Respirator to provide TH-3 rated respiratory protection (NPF 500). For conditions where supplied air is required we offer the 3M™ Versaflo™ Series Regulators.

G5-01 Comfort headband

Design with extra comfortable back part option, less parts and further improvements compared to the Speedglas 9100 headband.

Easy adjustment

Easy adjustment of distance to face, utilizing a button to enable sliding the welding helmet back and forth while wearing the helmet.

Back part options

Selection of welding helmet back part; two options exist, a larger back part and a traditional (same as 9100) part.

Hazards

Costs associated with workplace eye injuries:
\$300M/yr

Each year in the US alone, more than \$300 million is spent on costs associated with workplace eye injuries, including medical expenses, workers' compensation, and lost production time.

Source: www.osha.gov/SLTC/eyefaceprotection (01.03.2017)

90%
of injuries preventable with proper protection:

More than 90% of serious eye injuries at work can be prevented using appropriate protective eyewear.

Source: www.preventblindness.org/eye-safety-work (01.03.2017)

How to beat the statistics

Welding processes typically generate hazardous ultraviolet/infrared radiation and (intense) visible light that have the potential to lead to permanent eye damage. Physical eye hazards include welding spatter and grinding particles.

Controlling exposure

Put simply, auto-darkening welding filters allow welders to keep their welding helmet in place much more often than passive welding filters.

If you can always see well, the motivation to constantly lift your shield is significantly reduced, meaning:

- You reduce the likelihood of exposure to harmful UV/IR radiation by accidentally striking an arc. Or being exposed to the arcs of nearby welders.
- You reduce the potential for foreign body eye injuries from grinding swarf or weld spatter.

1/4
of all welding injuries are to the eyes

Eye injuries account for one quarter of all welding injuries, making them by far the most common injury for welders, according to research from the Liberty Mutual Research Institute for Safety.

What’s happening as I weld?

What do increased clumsiness, ulcers, and flu symptoms have in common? They – and other symptoms – might be associated with overexposure to welding fumes.

Potential immediate health effects of certain welding fumes

- Eye, nose and throat irritation
- Dizziness
- Nausea
- Headaches
- Metal fume fever. Notably, it is more likely to occur after time away from the job (weekends, holidays, etc.)¹⁾

Potential long-term health effects of certain welding fumes

- Lung function abnormalities, including bronchial asthma, chronic obstructive pulmonary disease (COPD), pneumoconiosis and other pulmonary fibrosis (chronic beryllium disease, cobalt lung).²⁾
- Larynx and urinary tract growths.³⁾
- Certain fumes may be associated with stomach ulcers, kidney damage, and nervous system damage.³⁾

Occupational Exposure Limits (OEL) are typically country specific. It’s legal within many country regulations to inhale up to 11 grams of zinc oxide every year. What does that mean?

11 gram of welding particles

To illustrate a general example: working with an OEL of 5 mg/m³ for zinc oxide, a full-time welder may inhale up to 11 grams of zinc every year.⁴⁾

TH2

TH2 rated respirator systems have a Nominal Protection Factor of 50, meaning that when the respirator is used correctly, the wearer's exposure should be reduced to 1/50th. (the area above the purple line).

TH3

With a TH3 rated respirator, the Nominal Protection Factor is 500, meaning that the when the respirator is used correctly, the wearer's exposure should be reduced to 1/500th, or approximately 0.022mg (too small of an amount to illustrate here). It's becoming more common that countries set TH3 as their standard for welding respiratory protection.

 In recent years, much more has been learned about the health risks associated with welding fumes, with many countries acting to lower their OELs. On a country level, local requirements are becoming more stringent about welder respiratory protection.

1) “Prevalence and association of welding related systemic and respiratory symptoms in welders,” Occupational & Environmental Medicine, El-Zein M., Malo J-L., Infante-Rivard C., Gautrin D., 2003;60:655-661.
2) “Welding-Related Respiratory Diseases” article, (translated from) Medycyna Pracy (Occupational Medicine), Wittczak T., Walusiak J., Pałczyński C., 2009;60(3):201-8.
3) “Controlling Hazardous Fumes and Gases during Welding,” OSHA Fact Sheet, U.S. Department of Labor, DSG FS-3647, March, 2013.
4) The example is based on a typical respiratory rate of 20 litres of air per minute or 2300 m³ of air per year. The reference used here is the OEL of zinc for Sweden, 2015 (5mg/m³).

Reducing welding fumes & exposure

Welding creates respirable and inhalable fumes. To address these hazards, employers and employees use a hierarchy of controls. The idea is that the highest priority items on the hierarchy

not only do the most to reduce fumes and worker exposure, but that they also put the least burden of responsibility on the welder. However, welding fume control has its limitations:

1

Modify or substitute your welding process to other processes that generate less fumes and/or eliminate contaminants.

Control Limitations: Substitutions may not be possible.

2

Engineering controls include modifying enclosures around the welder, or the general ventilation of the workshop, or local exhaust controls.

Control Limitations: Ventilation can be difficult to achieve due to conflicting needs, for instance heating/cooling or shielding gases.

3

Work practices include having the welder keep their head out of the plume.

Control Limitations: Space-restricted workpieces or the welding situation may not allow alternative placement of the welder’s head.

4

Personal respiratory protection equipment. As an addition to steps 1 through 3 personal respiratory protection for the welder can help reduce exposure and increase protection and comfort.

Control Limitations: Companies should establish a respiratory protection program that includes selection of respirators, training and maintenance.

FACTS:

Respiratory protection is the 3rd most frequently cited workplace violation¹⁾ in the U.S.

40–50 welders
in UK are hospitalised every year with pneumonia associated with welding fume. Two of these welders die every year.²⁾

1) Top 10 Most Frequently Cited Standards, OSHA, U.S. Department of Labor, for 2020.
2) Source: www.hse.gov.uk/welding/illness.htm (02.03.2017).

Selection guide

There is no one perfect welding helmet

We have populated our helmet matrix with carefully considered design blends of features, personal preferences, and performance to address the application needs of the vast majority of welders.

But for every helmet system we design, we have four driving factors:

Reliability

We know harsh welding environments: We build our products to thrive in them. From creating reliable arc sensing/shade switching to selecting highly durable materials to designing for long-lasting mechanical operation.

Comfort

Comfort means a helmet that helps vent stagnant air. It means a headband that avoids scientifically determined pressure points around your head. And how a helmet provides eye and face protection while being comfortable for a full shift.

Protection

UV/IR radiation. High speed grinding particles. Falling objects. Respiratory hazards. Identify your workplace hazards - then find the right Speedglas helmet, accessories, and respiratory protection. Have a unique workplace hazard? Contact your local distributor for even more 3M solutions.

View

Every helmet design detail can affect your view. That's why we provide high-performance auto-darkening welding filters, our side windows lenses, and large, protective clear visors. Each of these, and many more, helmet design elements maximise your ability to see.

Quick helmet selection guide

What kind of welder are you?

Heavy industry welding situations at high amperage and a lot of grinding.

High precision Tig welding situations where viewing wide and “clear” is necessary.

General welding situations at mid to low amperage in a variety of materials.

When welding needs to happen in a lot of different situations, locations, companies, conditions and positions.

1) Natural Colour Technology when using the 9100XXi filter.

Your decision tree when selecting a welding filter

1. Is TIG the majority of your welding?	3M™ Speedglas™ Welding Filter G5-02 For 3M Speedglas's best available optical performance during TIG welding, choose our curved welding filter for its exceptionally wide viewing area, shade 2.5 light state, and 3M™ Natural Color Technology. More information on page 56–60	
2. Variable Colour setting for your personal preference	3M™ Speedglas™ Welding Filter G5-01 For your best viewing comfort and contrast during welding, select from three different colour tones for your dark state. A world's first! More information on page 42–47	
3. Would you benefit from seeing more natural colours and better contrast?	Natural Colour Technology See less green and more details: NC Technology can make colors appear more natural while increasing contrast for easier viewing of details. More information on page 12–13	
4. Do you do a lot of tack welding?	Tack welding comfort mode Avoid possible eye fatigue from constantly switching from light to dark during prolonged tack welding. Our tack welding comfort mode uses an intermediate light state that can be easier on your eyes.	
5. How important is the size of welding filter's viewing area?	Welding Filter viewing size Desired viewing area is a function of both welding set-up and personal preferences. We offer a variety of filter sizes to meet many needs. More information on page 62	

What dark shade levels are you looking for?

3) The nominal protection factor based on laboratory-measured performance data according to European Standards.
The protection factor is assigned by local authorities in each European country and can therefore be different for each country.

Equipment that can potentially pay for itself in two months

Not only can you weld faster when you can see more clearly, but your entire movement around your workpiece can become more efficient when you're not constantly having to raise and lower your shield.

We've studied welders and their increased efficiency when using our auto-darkening filters (ADFs) for almost four decades:

- The shorter the weld, the greater the productivity increase. Not surprising, applications requiring lots of tack welds have the most to gain.
- Where the final appearance of the weld is critical – for example, on high-value items – reduction in scrap alone (e.g., from bad starts) can quickly pay for our helmets.
- Since most welders do a combination of tack and longer welds, we use a conservative, generalised estimate of 15% gain in productivity.

So, for example, if you're paying a welder €20 per hour, a 15% improvement in productivity will pay for a €450 helmet in about two months and result in a year-end increase in savings (new profits) of €4500 when compared to continuing to use passive filters.

This is an example:

\$28,280

Average cost of injuries to the face, including disabling and non-disabling eye injuries.¹⁾

20,300

Lost work days in 2012¹⁾

Ask yourself

Are you doing everything possible to maximise the amount of time your welders have their shield in the safe, down position?

The right equipment for each job

It is the employer's responsibility to identify all welding hazards in their workplace, to explain those hazards to their welders, and to develop a documented welder safety protection plan.

That protection plan needs to be specific and cover all variables that a welder may encounter. Those variables can include changes to base metals, electrodes, the amount of sparks or splatter generated, fume intensity, the location of the weld, ventilation limitations, and so on.

The protection plan must then instruct welders how these variables impact their selection of personal protective equipment (PPE) for specific welding applications.

Fortunately, the 3M™ Speedglas™ team has developed a wide range of PPE, so welders can select the right equipment for each job. That means meeting several of the welder's protection needs – plus empowering welders to perform at their highest levels.

Identify the hazards

Make a list of all the risks in your welding environment (arc radiation, sparks, fumes, noise, trip hazards, falling objects, etc). 3M can help identify consultants and measurement tools.

Assess the risk levels

By evaluating every risk, you can prioritise their mitigation. See more details in each section of this catalogue. If there are any doubts or ambiguities, always consult a professional safety engineer.

Select the right PPE

Now that you know the levels of protection needed for a specific application, you can select the right level of PPE to help protect each vulnerability: eye, face, head, hearing, and respiratory system.

Within the appropriate level of protection, let welders choose on matters of personal preference regarding comfort, style, and ease of maintenance. For example, sweatbands can be in leather, fleecy cotton, or towelling. These personalised comfort choices help to maximise user acceptance of PPE.

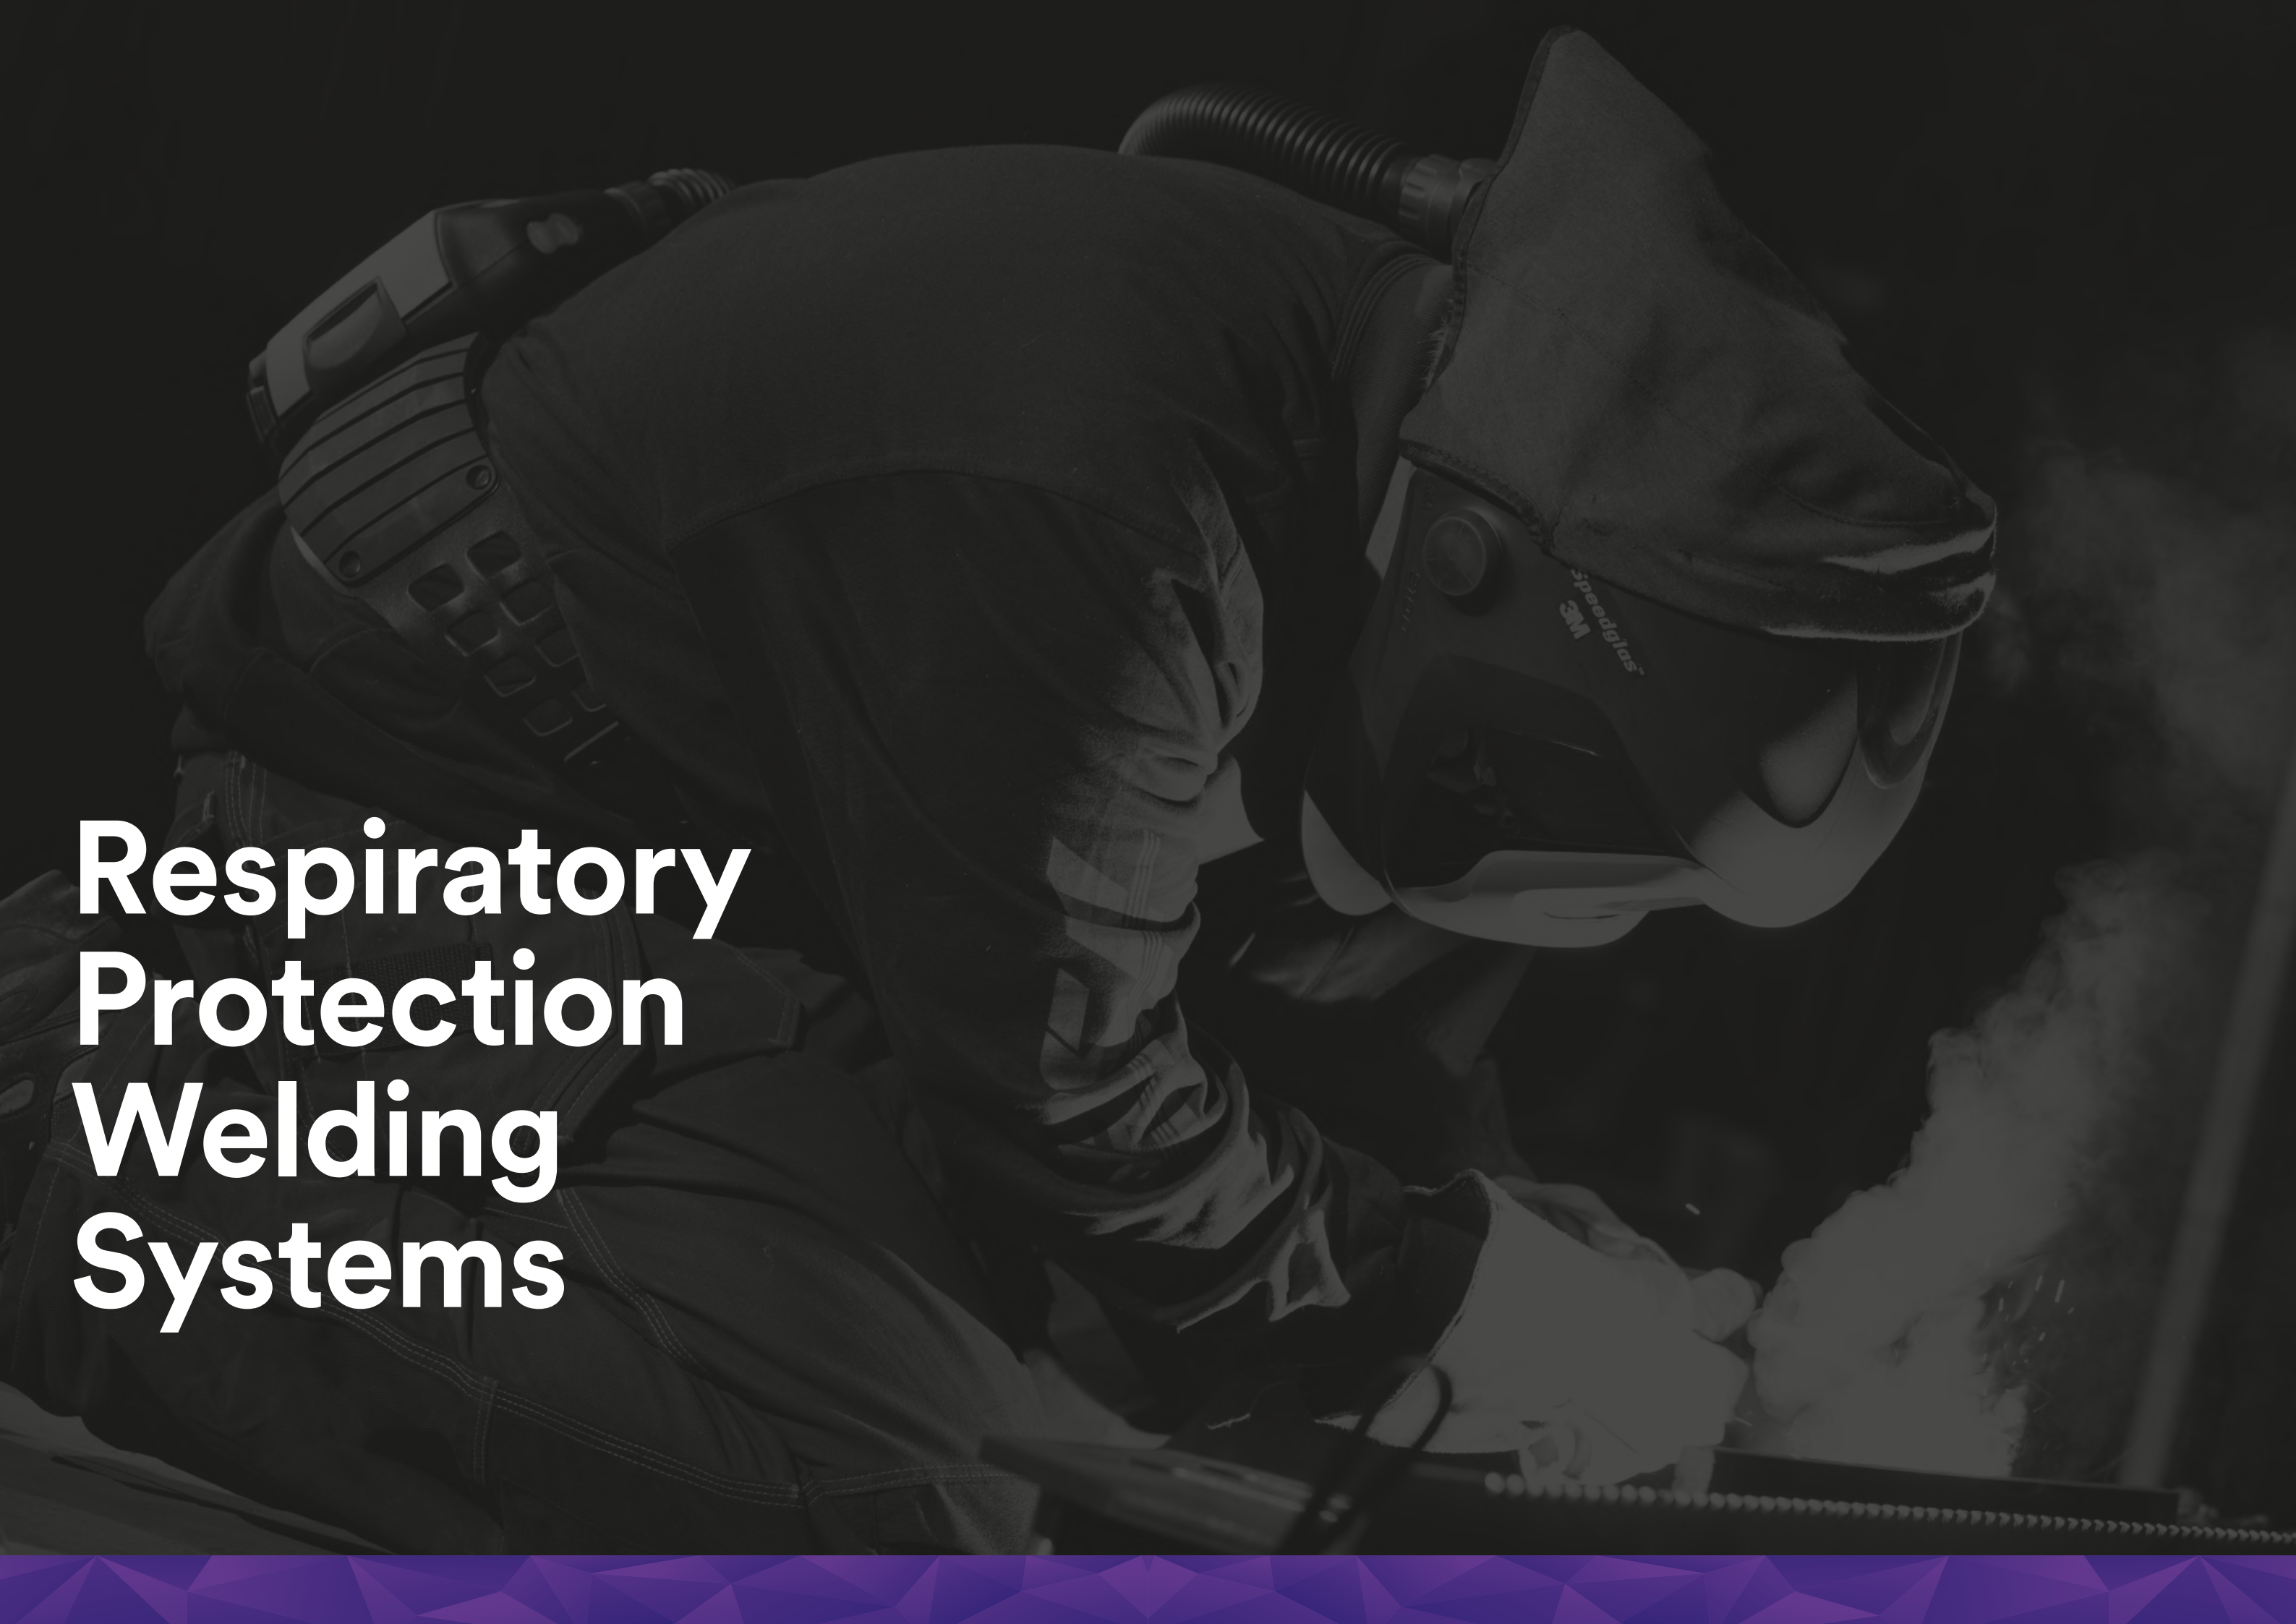

Training, motivation and maintenance

For maximum benefit from any piece of PPE, it pays to focus on user acceptance and proper use. 3M can help:

- On-site training by 3M personnel or a visit from our Welding Safety Caravan (not available in all countries). We'll show you equipment options based on your needs.
- 3M eAcademy - the flexible way to discover and learn throughout your busy day: www.3m.com/3M/en_US/3m-academy/log-in
- Other techniques, such as Toolbox Talks, educational posters for your facilities, online videos, etc.

 For further details please visit www.speedglas.com and select your country to find local welding safety information from 3M.

Respiratory Protection Welding Systems

A quick look at 4 respirator styles and their advantages

The following is an overview of the four general types of 3M respiratory protection found in this Catalogue. In addition to your application's specific filtration requirements, your selection process may include factors such as equipment style/configuration, personal preference/comfort, and maintenance considerations.

3M™ Adflo™ Powered Air Purifying Respirator

Provides a constant flow of filtered air over your face.

Enables high mobility with a high level of protection against specific particulates and/or gases.

3M™ Versaflo™ Supplied Air Regulators

Can be suitable for protecting against contaminants with poor warning properties (e.g., no smell or taste).

Cool or heat your airflow by as much as 28°C using the V-100E or V-200E (respectively) regulators.

3M™ Reusable Respirators

Choose from three different half mask series – based on your filtration needs and maintenance/personal comfort preferences.

All three series are compatible with many 3M™ Speedglas™ Welding Helmets.

3M™ Filtering Facepiece Respirators for welding

Provide lightweight, convenient, comfortable respiratory protection against dusts, mists, and metal fumes.

Fit under virtually all welding helmets.

Note: Details regarding performance and limitations are set out on the respirator packaging, user instructions, or on 3M.com.

Designed for welders

The ergonomic leather belt, shaped for maximum freedom, is extra wide around the PAPR for additional back support.

A system for your needs

System components are designed to work securely together, combining head, eye, face and respiratory protection.

Move around

The slim profile and ergonomic PAPR design makes it easier to go into tight spaces. The robust 3M™ Adflo™ Powered Air Purifying Respirator provides all of the features you would expect in a premium system, including easy-to-use functionality.

3M™ Adflo™ Powered Air Purifying Respirator

Your own filtered air flow...
...mobile and adaptable

Is there a way to both provide respiratory protection against harmful welding fumes while increasing the comfort around your face and head? Tackle workplace hazards with a respiratory protection solution workers will want to wear.

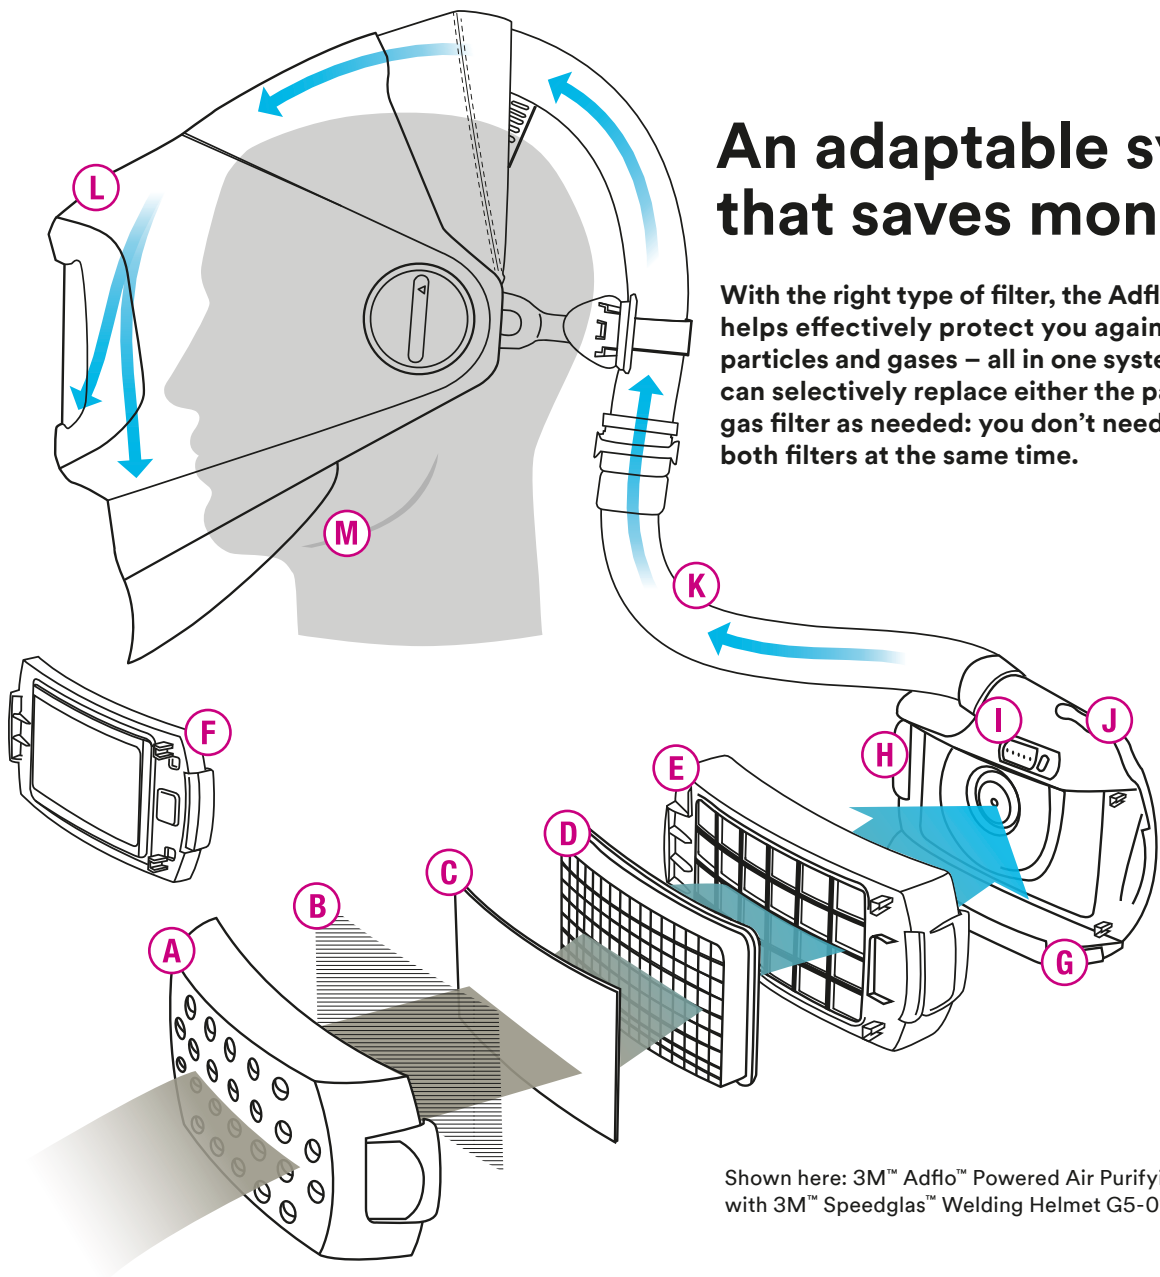

As one of the most popular respirators of its kind in the world, the 3M™ Adflo™ Powered Air Purifying Respirator is designed to provide welders a constant nominal airflow rate of 170 litres per minute¹⁾, regardless of the battery's charge or the particle loading of the filter.

Green for go

As soon as you turn on your Adflo powered air purifying respirator, a display indicates the status of the filter. Green light means that the unit is working normally. Red light indicates that the filter is clogging.

<p>1. One green indicator: new particle filter. Two green indicators: if also a new gas filter is installed .</p>	<p>2. As the filter is clogging more indicators will lit up.</p>	<p>3. Three green and one red light: expect a shorter battery runtime. Particle filter replacement is recommended.</p>	<p>4. Three green and two red lights: the particle filter is clogged and must be replaced.</p>
---	--	---	---

1) 205 litres per minute for the version with the larger battery

An adaptable system
that saves money

With the right type of filter, the Adflo respirator helps effectively protect you against both particles and gases – all in one system. And you can selectively replace either the particle or the gas filter as needed: you don't need to change both filters at the same time.

Shown here: 3M™ Adflo™ Powered Air Purifying Respirator with 3M™ Speedglas™ Welding Helmet G5-01

- A Filter cover:** holds the different available Adflo filters.
- B Spark arrestor.**
- C Prefilter:** increases the service life of the particle filter.
- D Particle filter:** high efficiency particulate filtration (must be installed at all times).
- E Gas filter:** (A1B1E1 or A2) captures organic, inorganic and/or acid gases and vapours. Gas filters sold separately.
- F Odour filter:** removes unpleasant smells (not needed if a gas filter is installed); sold separately.
- G Li-ion battery:** fully charges in approx. 4,5 hours. Expected operating time is 7–9 hours at the standard 170 l/m airflow setting with a new particle filter and a new, fully-charged battery.
- H Brushless motor.**
- I Filter/Battery Indicator:** LED status for both the particle filter and battery.
- J Airflow plus:** for hot, humid jobs, you can increase the airflow from 170 l/min to 200 l/min with the push of a button.
- K Breathing tube:** different options available.
- L Airflow:** for your maximum comfort filtered air is distributed throughout the entire breathing zone. Plus, the intelligent PAPR keeps the airflow rate at a constant, preset level.
- M Soft, flexible face seal (removed here for clarity):** creates a positive pressure environment within the helmet, helping keep the surrounding pollutants at bay.

High quality air

The airline supply must be air of breathable quality meeting the requirements of EN 12021. On page 100 you will find air cleaning stations from 3M.

Stay aware

If your air supply would ever fall below 170 lpm, the regulator's warning whistle will sound.

Many helmet options

Achieve a Nominal Protection Factor of 200 when you combine the 3M™ Versaflo™ Belt Mounted Regulators with our 3M™ Speedglas™ Welding Helmets 9100-Air, 9100 FX-Air, 9100MP, 9100MP-Lite or G5-01.

3M™ Versaflo™ Supplied Air Regulators

Light on your belt and soft on your ears

V-100E Air Cooling

V-200E Air Heating

V-500E Flow Controlled

The balanced, belt-worn, V-500E regulator consistently delivers the airflow level you set (170-305 l/min). An integrated silencer keeps the noise level equivalent to a typical conversation.

There are two alternative regulators to either cool (V-100E) or heat (V-200E) the airflow by as much as 28°C. These regulators are excellent choices for workers exposed to uncomfortable temperature ranges.

3M™ Speedglas™ Welding Helmet G5-01

Take control of your flow

For more control over your comfort, the innovative G5-01 helmet duct system lets you direct the airflow to either your face ①, your visor ②, or some combination of both.

You can even adjust the amount of air coming from the top outlet ③ vs. the two side outlets ④, or choose a blend of both.

All airflow adjustments can be made while you're wearing the helmet – and continuously maintaining your eye, face and respiratory protection.

Scan this code to see how it works!

Stay protected

This flip-up functionality allows you to seamlessly switch between welding and grinding tasks while maintaining powered air purifying respirator protection. The clear visor also allows you to set-up, inspect and move around the workplace without the need to remove the face protection or break the positive pressure respiratory seal.

A system for many needs

Designed for heavy-duty, high-amperage welding and grinding, the G5-01 welding helmet connects to the 3M™ Adflo™ Powered Air Purifying Respirator to provide TH3-rated respiratory protection (NPF 500). The robust Adflo respirator provides all of the features you would expect in a premium system, including easy-to-use functionality.

For conditions where supplied air is required we can offer the 3M™ Versaflo™ Series Regulators.

Helmet viewed from below

An all-new face seal features a locking toggle designed for fast, secure adjustments. Two new tabs make it easier to lift the seal over your glasses. And installation channels on the helmet speed the removal and replacement of the seal.

Scan this code to see how easy it is to adjust!

Light up your workspace

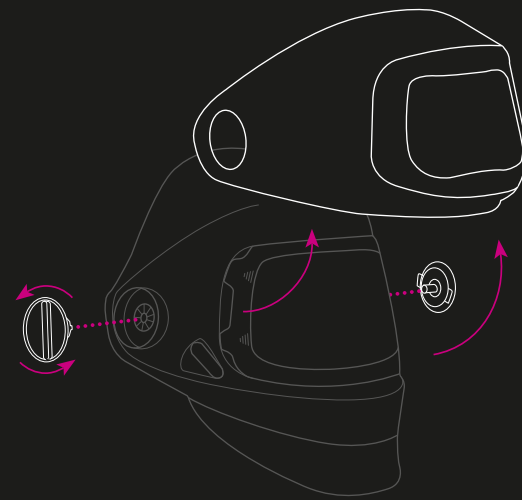

A new, optional helmet-mounted task light provides hours of powerful lighting and runs off the Adflo battery pack, helping welders to enter and work in poorly lit spaces.

- Task light specifically designed for welding
- Light weight – powered by the Adflo battery
- Positioned to cast a wide light of the workpiece
- Designed for even light distribution at normal welding distance
- Configurable light intensity

Designed to be slim,
without compromising
on heavy-duty coverage

The Speedglas welding helmet G5-01 is designed for rough conditions.

For extended non-welding work, just unscrew the two dials to completely remove the welding visor and re-attach the dials again, reducing the helmet weight by up to 36%.

Easy to access and use controls: all adjustable functions are imprinted on the helmet, and adjustments can be made while wearing the helmet and your gloves.

Helmet in standard configuration with rigid neck protection and the smaller, fabric head protection.

For increased visibility at all times, add the fluorescent yellow extended head protection **16 90 21**

To better enable you to weld when looking down, replace the rigid neck protection with, for example, the smaller fabric neck protector **16 90 41**

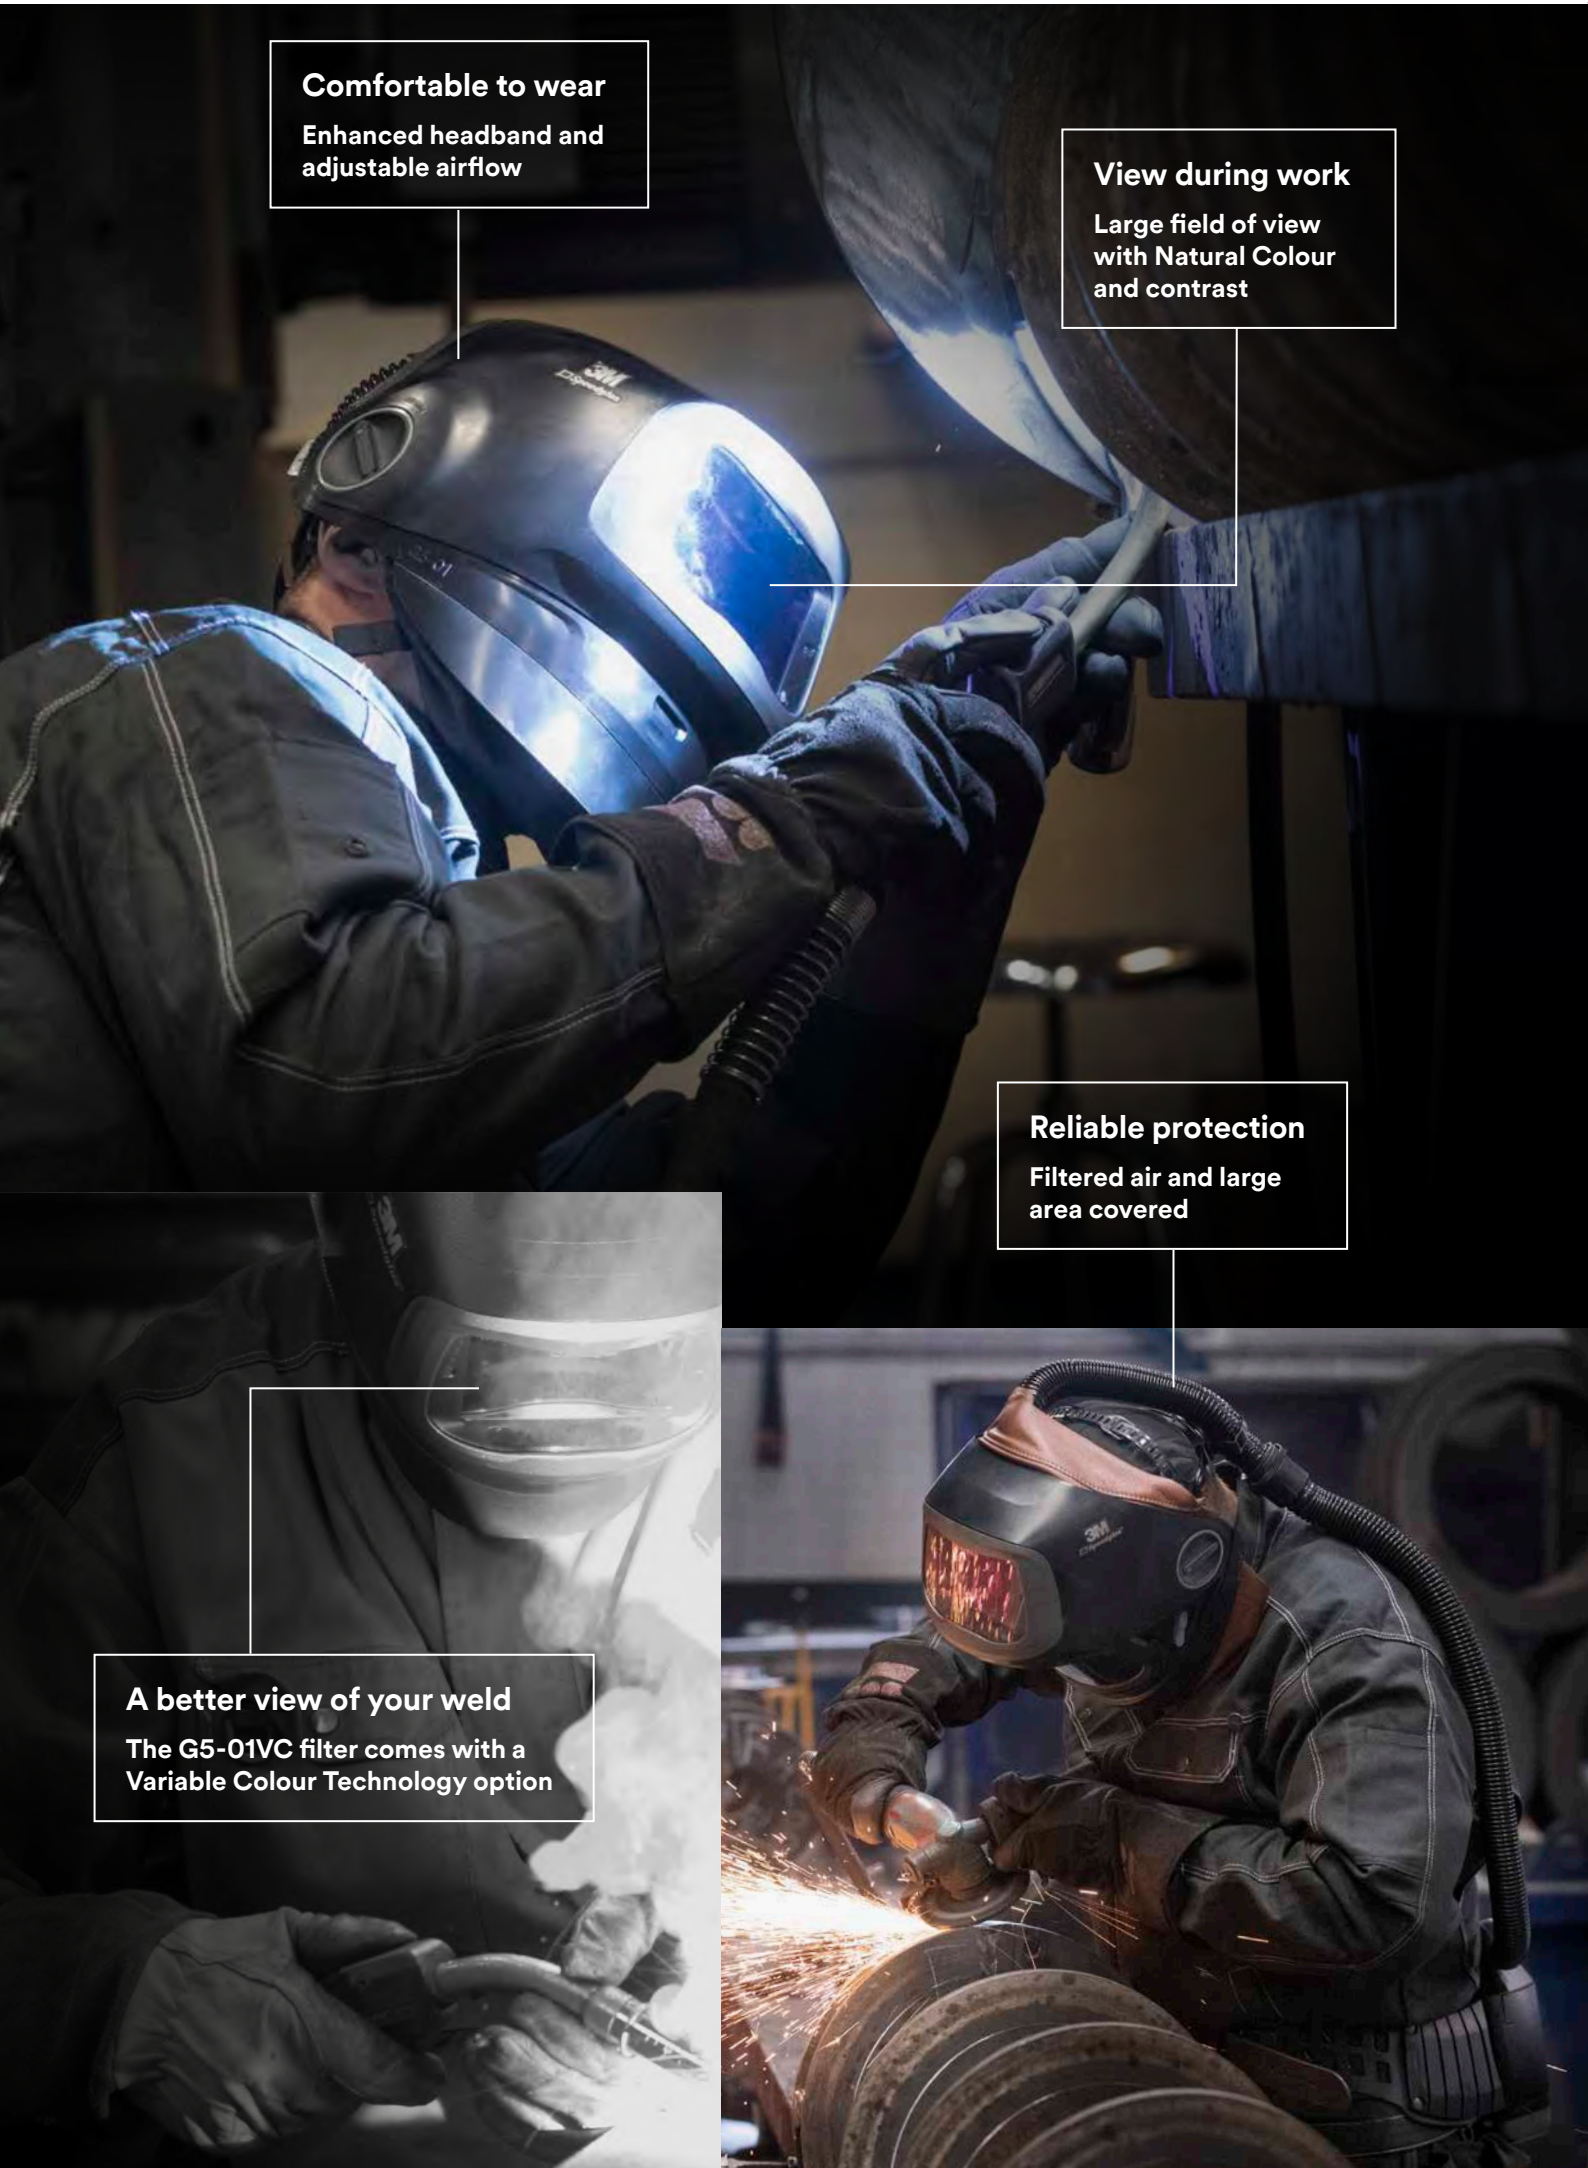

When you need the durability of leather, attach the leather head protector **16 90 22** and the leather neck protector **16 90 43**

Increase coverage of your head, neck and chest by adding the larger fabric head cover **16 90 23** and/or the extended fabric neck protection **16 90 42**

To maximise coverage from sparks, add the fabric shroud **16 90 30** and the extended, larger fabric head protection **16 90 23**. Also available as a kit, **16 90 35**

Comfortable to wear

Protecting your eyes and face from radiation, heat and sparks – while providing a precise view of your work – makes your Speedglas welding helmet 9100 one of your most important welding tools.

All of these benefits can be used with powered or supplied air respiratory protection in combination with the Speedglas welding helmet 9100-Air.

If your work situation requires head protection, test out our Speedglas welding helmet 9100-QR. It quickly attaches to many of the industry’s most popular safety helmets, including the 3M™ Safety Helmet H-701.

Standard welding helmets

3M™ Speedglas™ Welding Helmet G5-02

Your world is curved, not flat

Introducing the world's first curved auto-darkening filter (ADF) with the 3M™ Speedglas™ Welding Helmet G5-02.

Utilizing the new 3M™ Speedglas™ Curved Glass Technology, its shape follows your head's curvature and the range of your peripheral vision.

Think about it:

The wider a flat ADF gets, the wider the helmet must become. We like to present our latest solution by using a curved glass.

Light
shade 2.5

Natural
Colour

4 arc
sensors

Good protection against radiation

The wide, curved lens means the shield can be closer to your eyes, for a great view of your arc plus increased head, side and neck coverage when compared to many helmets with a flat front design.

Comfortable to wear

Relatively low weight, closeness to face and better centre of gravity

Good visibility before and after welding

Curved lens with our largest view ever, Natural Colour Technology and 2.5 in light state. Plus magnifying lens options.

Designed for TIG welders, the G5-02 helmet creates a new world standard for precision ADF viewing. This is a helmet for welders doing high-performance, critical work.

You'll also benefit from a lighter total helmet weight, due to a thin ADF glass pack. What's more, you'll notice that the center of gravity is closer to the center of your head, giving you better weight distribution.

And for the slim helmet we created a new exhaled air venting design which may help you feel more comfortable.

3M™ Speedglas™ Auto-Darkening Filter G5-02

Leading Edge Innovation for great view

Great clarity before, during and after welding, with our 3M™ Speedglas™ Natural Colour Technology. Colours appear brighter and more realistic in both the light and dark states. And a more realistic view enables better control over your arc. Certified to shade 2.5.

3M™ Speedglas™ Auto-Darkening Filter G5-01
Colour Technology to suit your needs

There are two options of 3M™ Speedglas™ Auto-Darkening Filter Series G5-01 – both offering the popular 3M™ Speedglas™ Natural Colour Technology with great clarity before, during and after welding.

Smoother dark-light filter transition

Both G5-01 filters are also designed to minimise eye strain when switching from dark state to light state, by using an intermediate shade (only sensitivity 4 and 5).

Speedglas welding filter G5-01VC

- Adjustable dark shades 5 (cut) and 8 to 14.
- Variable colour technology

Speedglas welding filter G5-01TW

- Adjustable dark shades 5 (cut) and 8 to 13.
- Tack Welding Mode

Your choice of auto-darkening filters (ADF)

The 3M™ Speedglas™ Welding Filter Series 9100 continues our tradition of great optical quality, including uniform shading and minimal distortion across the entire filter viewing area.

By selecting just the right setting for each task, you can reduce eye strain and improve the quality of every weld.

3M™ Speedglas™ Auto-Darkening Filter 9100XXi

- See your welds in a new light, with more contrast and natural-looking colours.
- Grab and go welding with Auto-ON.
- 107×73 mm viewing area.
- Dark shades 5, 8, and 9 through 13.
- Any shade can be locked-in.
- Delay settings allow the welder to extend the dark state for when the weld pool is still cooling.
- When used with the special 9100XXi Silver Front Panel and the Speedglas Welding Helmets 9100, 9100-Air and 9100-QR, you'll have access to the external control for both grinding and the memory modes.

3M™ Speedglas™ Auto-Darkening Filter 9100XX

- 107×73 mm viewing area.
- Dark shades 5, 8, and 9 through 13.
- Any shade can be locked-in.
- The tack welding comfort mode may help reduce eye fatigue resulting from the eye constantly adjusting to differing light levels during tack welding. Using an intermediate light state (shade 5).
- Delay settings allow the welder to extend the dark state for when the weld pool is still cooling.

3M™ Speedglas™ Auto-Darkening Filter 9100X

- 107×54 mm viewing area.
- Dark shades 5, 8, and 9 through 13.
- Any shade can be “locked-in.”
- The tack welding comfort mode may help reduce eye fatigue resulting from the eye constantly adjusting to differing light levels during tack welding. Using an intermediate light state (shade 5).
- Delay settings allow the welder to extend the dark state for when the weld pool is still cooling.

3M™ Speedglas™ Auto-Darkening Filter 9100V

- 93×45 mm viewing area.
- Dark shades 5, 8, and 9 through 13.
- Any shade can be “locked-in.”
- The tack welding comfort mode may help reduce eye fatigue resulting from the eye constantly adjusting to differing light levels during tack welding. Using an intermediate light state (shade 5).
- Delay settings allow the welder to extend the dark state for when the weld pool is still cooling.

Staying connected now and in the future

Today's benefits from the 3M Connected Equipment App

- Opt-in by securely pairing your smartphone to your G5-01 or G5-02 welding filter using the 3M Connected Equipment App.
- Program up to 10 ADF memory modes (i.e., settings for dark shades, sensitivity, delay, etc.) using your phone.
- Easily record your maintenance log for your welding helmet to the app.
- Instantly know statistics, including hours on; hours in dark state; hours in light state; and the number of on/off cycles.
- Get ready access to user manuals and parts lists and, when Web-connected, to how-to videos.

All 3M™ Speedglas™ Generation 5 have Bluetooth™ connectivity, enabling the Internet of Things (IoT) productivity for welding safety. This will allow you to be part of the connected future and benefit from the evolution of features and data accessibility

Improved comfort
Head suspension features a smooth ratchet for easy tightening – even while wearing gloves!

Award-winning design
More than 20 years ago, the 3M™ Speedglas™ Welding Helmet 9000 set a new standard for rugged, dependable protection.

A helmet loved by many welders and internationally awarded for its ergonomic design.

Better control of the weld puddle
Improved optics in the 3M™ Speedglas™ Welding Filter 9002NC helps you see your welds in a new light, which may be perceived as better contrast and more natural looking colours.

3M™ Speedglas™ Welding Helmet 9002NC

Light and narrow,
for quick tasks

You asked and we listened.
Many welders think our classic Speedglas helmet 9000 has the ideal blend of shape and balance.

So we've brought it back
– upgraded for a totally new optical experience.

and face seals.

3M™ Reusable Respirators

3M™ Secure Click™ Half Mask, Reusable Respirator HF-800 Series

- Unique particle and gas filter connection, push until you hear a click
- Speaking diaphragm designed to help provide easier communication while working
- Exhalation valve directs exhaled breath and moisture downward

3M™ Maintenance-free Reusable Respirator 4000+ Series

- Maintenance-free: save time with integrated filters.
- Less heat and moisture build-up due to the central exhalation valve.
- Reusable until damaged, clogged with particulates, or saturated with gas.

3M™ Reusable Half Masks 6500 Series

- Our silicone facepiece keeps it shape, even in high-heat environments.
- Low-profile, wide field-of-view design.
- Easy on and off, in non-contaminated environments, with our convenient Quick Latch (QL) Drop-Down Mechanism.
- Easy breathing with 3M™ CoolFlow™ Exhalation Valve.

3M™ Reusable Half Masks 7500 Series

- Soft silicone face piece material for great comfort and durability.
- Easy breathing with 3M™ CoolFlow™ Exhalation Valve.
- Convenient Drop-Down Mechanism.

3M™ Reusable Respirators	Performance level	Approval
Secure click HF-800 Series with 3M™ Particulate Filter 3128	10 x OEL for Ozone 12 x OEL for particles Plus relief from nuisance level acid gas/organic vapours	EN 140:1998 (masks) EN 143:2000 + A1:2006
Secure click HF-800 Series with 3M™ Particulate Filter 3138	10 x OEL for Ozone 50 x OEL for particles Plus relief from nuisance level acid gas/organic vapours	EN 140:1998 (masks) EN 143:2000 + A1:2006
Maintenance Free Reusable Respirator 4255+	10 x OEL ¹⁾ or 5000ppm (whichever is lower) for organic vapour ²⁾ 50 x OEL ¹⁾ for particles	EN405:2001 + A1:2009 FFA2P3 R D
Maintenance Free Reusable Respirator 4277+	10 x OEL ¹⁾ or 1000ppm (whichever is lower) for organic vapours ²⁾ , inorganic vapours and acid gases 50 x OEL ¹⁾ for particles	EN405:2001 + A1:2009 FFABE1P3 R D
Half masks 6500QL or 7500 with 3M™ Particulate Filters 2128	10 x OEL ¹⁾ for Ozone 12 x OEL ¹⁾ for solid and liquid particles (P2 R) Plus relief from nuisance level ³⁾ acid gas/organic vapours.	EN140:1998 (masks) EN143:2000 + A1:2006
Half masks 6500QL or 7500 with Particulate Filter 2138	10 x OEL ¹⁾ for Ozone 50 x OEL ¹⁾ for solid and liquid particles (P3 R) Plus relief from nuisance level ³⁾ acid gas/organic vapours.	EN140:1998 (masks) EN143:2000 + A1:2006

Since everyone's head size and shape is different, we recommend that you work with your 3M™ distributor to find the respirator models that are most compatible with your welding helmet(s). The filter option reference is for particle filtration. The 3M™ Half masks can be combined with many other types of filters for both gases and vapours. Please visit www.3M.com to find other options.

1) OEL = Occupational Exposure Limit – please use local exposure limit.
2) Organic vapours boiling point >65 degrees C.
3) Nuisance level means concentrations below the OEL.

Metal nose clip

Shape it to your individual nose size and facial profile with the adjustable metal nose clip.

Breathe easy

3M™ Advanced Electret Filter Material combines effective filtration with low breathing resistance.

Exhalation Valve

Welding and metal pouring respirators all feature the proprietary 3M™ CoolFlow™ Exhalation Valve.

3M™ Welding Fume Disposable Respirators

Light, convenient and comfortable protection

Looking for lightweight, effective and comfortable respiratory protection against dusts, mists, and metal fumes?

Especially designed for welders, the 3M™ Disposable Respirators 9925 and 9928 include a flame-retardant, anti-clog outer surface that resists blockage even after extended use against welding fumes.

3M™ Particulate Filters	Model	Approval	Substance
	9925 – Without faceseal.	EN149:2001 + A1:2009 FFP2 NR D	12 x OEL ¹⁾ + Ozone 10 x OEL Nuisance level ²⁾ odours below OEL ¹⁾ .
	9928 – With soft, PVC inner faceseal. Improves comfort and can be hygienically cleaned (can be used for more than one shift).	EN149:2001 + A1:2009 FFP2 R D	12 x OEL ¹⁾ + Ozone 10 x OEL Nuisance level ²⁾ odours below OEL ¹⁾ .

1) OEL = Occupational Exposure Limit - please use local exposure limit.
2) Nuisance level means concentrations below the OEL.

The challenge of hearing protection for welders

Even five minutes of carelessness can significantly reduce the protection received

That’s right: if you’re in a harmfully loud workplace – at or above 85 decibels – then not having your ear protection in place even just 10% of the time can significantly reduce your protection. Noise-induced hearing loss (NIHL) is caused by the damage and eventual death of the ear’s hair cells. Unlike some other cells, human ear hair cells never grow back.¹⁾

Too loud may be less loud than you think

Think of all of the noises that surround you at your welding shop. Your tools, of course. But also the sudden, short, yet very loud noises: metal falling onto metal or hammers banging metal into place. Those sudden noisy spikes, at or above 85 decibels, could be damaging your hearing unless your hearing protection is always in place.

1) <https://www.nidcd.nih.gov/health/noise-induced-hearing-loss>

Moving towards 100% usage

Measure the noise

Determine where your facility falls on the regulations’ scale of Exposure Action Values (see table below) by having a professionally designed sound level and exposure testing assessment.

Create a Hearing Conservation Programme

Between the lower and upper Exposure Action Values, it is required to:

- 1. Provide information on potential hearing loss risks.
- 2. Provide the appropriate hearing protection devices.
- 3. Provide training.

Select hearing protection that your workers want to wear

This is an important step in moving towards 100% usage. The following pages offer Hearing Protection Equipment (HPE) options for virtually every welder’s needs and preferences.

Exposure Action Values	
87dB (A) 140dB (C) Peak LEX, 8h	Limit Value Cannot be exceeded at any time. Can be achieved with HPE.
85dB (A) 137dB (C) Peak LEX, 8h	Upper Exposure Action Value HPE must be used and a Hearing Conservation Programme initiated.
80dB (A) 135dB (C) Peak LEX, 8h	Lower Exposure Action Value HPE must be made available on request.

Despite industry regulations, 40 million workers are exposed to loud noise and 13 million suffer from hearing disorders.¹⁾

3M™ PELTOR™ Electronic Earplug, EEP-100 EU

Stay aware and communicate

3M™ PELTOR™ Electronic Earplug, EEP-100 EU, can help users protect their hearing, and also help promote auditory situational awareness and face-to-face communication.

3M | PELTOR™

3M™ PELTOR™ Electronic Earplugs help protect against hazardous noise, whilst allowing ambient sounds to be heard and increasing your ability to communicate with nearby colleagues, as well as hearing warning signals, approaching vehicles in lower noise environments.

3M™ PELTOR™ X Series Earmuffs

3M™ PELTOR™ Welding Earmuffs H505B

Lightweight low profile design
Fits nicely under 3M™ Speedglas™ 9100 Series and other welding helmets

Less scratch sound
Semi-soft cup surface helps minimise scratch sound transmission

Comfortable noise reduction
Soft ear cushions provide a comfortable seal and helps reduce noise exposure

Stays in place
Two-point suspension and wire headband for a secure, comfortable fit

Part No	1100	PP-01-002 (regular size uncorded)	328-1001 (corded model)	UF-01-000 (corded)	UF-01-014 (corded)	EC-01-000

These recommendations are general and are based on usage with 3M™ Welding Helmets. Your personal preferences may result in different selections: for additional product information and technical specifications, please visit www.3M.com

1) 3M™ Peltor™ X series earmuffs are also available in a neckband or headband model.

2) 3M strongly recommends personal fit testing of hearing protectors. Research suggests that users may receive less noise reduction than indicated by the attenuation label value(s) on the packaging due to variation in fit, fitting skill, and motivation of the user. Refer to applicable regulations or guidance on how to adjust attenuation label value(s). In the absence of applicable regulations, it is recommended that the attenuation label value(s) be reduced to better estimate typical protection.

3) Consult the X series user instruction for compatible safety helmets

4) Please add assembly part number Z3AF/2 when ordering X-series earmuffs for the headtops 9100MP/MP-Lite and Versaflo™ M-Series.

5) Only Versaflo M-200 and M-300 Series.

6) The 3M™ E-A-R™ Hearing Protection listed here were selected for use in a typical welding environment. For additional 3M hearing protection selections, and to get more product information and specifications, please visit www.3M.com

3M™ Protecta® Welders Range

3M™ Fall Protection Welders Range

Fire and sparks are a major concern in jobs such as welding, cutting, electrical maintenance and other high temperature applications. Staying protected requires special materials to resist these hazards.

The 3M™ Fall Protection Welders range is specifically designed to resist the potential heat damage experienced in these applications. Featuring highly durable heat resistant & flame retardant Modacrylic over Kevlar® webbing and a lightweight design provides the ideal solutions for welding at height.

3M Fall Protection

Our Fall Protection range for Welders includes:

3M™ PROTECTA® P200
Fall Arrest Harness

3M™ DBI-SALA®
Lanyard

3M™ DBI-SALA®
Self-Retracting Lifelines (SRL)

Compatibility

We strive to ensure our eyewear is compatible with other 3M products, such as our helmets, respiratory or hearing protection.

Engineered for safety, designed for style

The 3M™ Eye Protection portfolio seeks to deliver quality eyewear that helps provide an optimal balance of comfort, protection and design.

Confident protection

All 3M protective eyewear sold in Europe are CE-marked and approved to EN 166:2001.

How well do they fit?

Making a measured evaluation of eyewear fit

Everyone's face and head are different – so how is one model of eyewear going to fit everybody? You know the challenge. Ill-fitting safety glasses can cause pressure and pain in some very vulnerable areas: your temples, your ears...even the bridge of your nose. Discomfort and lack of style are often major reasons for noncompliance.

To make a meaningful, measured determination of eyewear fit and security on each of your employees, we've developed a 4-step method¹⁾.

The 3M™ Eyewear Fit System uses coverage and gap gauge tools to assess four key elements of protective eyewear fit:

①

View

Assessment to ensure the wearer can see in all directions of eye rotation without major obstruction to the field of view that could interfere with the ability to perform work tasks.

②

Coverage

The coverage gauge assesses how well the safety eyewear covers the soft tissue area around the eyes.

③

Security

Assessment to ensure the eyewear stays in place on the wearer's head and does not fall off with head movement.

④

Gaps

The gap gauges help to identify gaps between the eyewear and the face. Large gaps can provide a clear path for flying debris.

¹⁾ The full 6 step method is unique to 3M and is available free of charge (subject to terms and conditions, see website for details). Find out more by contacting your 3M Personal Safety Sales Representative or visit www.3M.com

3M™ Solus™ 1000 Series Spectacles

Configurable design with detachable gasket, temple or strap options

Sporty, low profile, available in multiple frame colours and lens tints with 3M™ Scotchgard™ Protector Anti-Fog Coating.

Padded temples for added comfort

Removable foam gasket helps reduce eye exposure to particulate hazards (kit models)

Contemporary styling with soft nosebridge for added comfort

Polycarbonate lenses absorb 99.9% of UVA and UVB rays

Range of lens colours includes clear, grey, indoor/outdoor grey and amber

Meets the requirements of EN 166:2001 Standard as an Impact Rated spectacle

3M™ SecureFit™ 400 Series Spectacles

Comfort and design in a variety of colours

Take the next step in comfort with 3M™ SecureFit™ 400 Safety Glasses, featuring 3M™ Pressure Diffusion Temple Technology, a soft one-piece nose bridge, dual-injected temples and a range of options, including lens colours, premium coatings, readers and more.

Available in multiple lens colours

Polycarbonate lenses absorb 99.9% of UVA and UVB rays

Optional removable foam gasket available for models without brow guard

Soft one-piece nose bridge

Choose from models with anti-scratch, anti-fog/anti scratch or optional 3M™ Scotchgard™ Anti-Fog/Anti-Scratch Coatings

3M™ Pressure Diffusion Temple Technology

Lightweight design

Soft temple tips

Meets the requirements of EN 166:2001 Standard as an Impact Rated spectacle

3M™ Scotchgard™ Anti-Fog Coating. Long-lasting clarity.

Uncoated

Microscopic water droplets bead up, forming condensation and fog, which obscure vision.

Water droplets

Lens

3M™ Scotchgard™ Protector Anti-Fog Coating

Reduced contact angle flattens water beads into a thin, transparent film that allows light to pass through.

Water as a transparent film

Lens plus two-sided anti-fog coating

3M™ Safety Helmet G3000 Series

Lightweight but tough

3M™ Series G3000 hard hat has been designed in close collaboration with industrial workers. It is intended for use in harsh environments with tough demands for effective protection, excellent ventilation and a maximum field of vision. Softly rounded design, without any sharp or protruding

components, the extremely comfortable lining and the simple adjustment of the neck strap make the G3000 unique. The helmet lining can be turned through 180 degrees – a big advantage when working in confined spaces, as it gives the wearer the maximum field of vision.

Available in 8 colours, with ratchet or pin-lock suspension

Material:	UV-stabilised ABS
Colours:	Yellow, White, Orange, Red, Blue, Green, Hi-Viz and Black
Weight:	310g (pin-lock) 334g (ratchet)
Size:	54–62cm for pin-lock version 53–62cm for ratchet version

Compatibility
The 3M™ Speedglas™ Quick Release (QR) Rail allows you to attach a Speedglas welding helmet to your G3001 safety helmet.

Optimise your workspace

It just takes a few moments every day to ensure that your 3M™ Speedglas™ gear is in optimum shape for your next use. Those few moments will be well spent time for your increased comfort and productivity – plus the service life of your system.

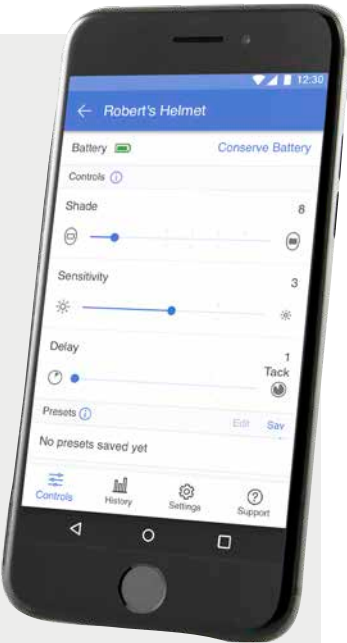

Pick a maintenance routine that works best for you: beginning of shift, after lunch, or end of work.

Your reward will be high clarity views, a refreshed helmet, and gear that's comfortable to wear and work in. Daily maintenance is especially important for respiratory systems to assure a continuous supply of filtered air.

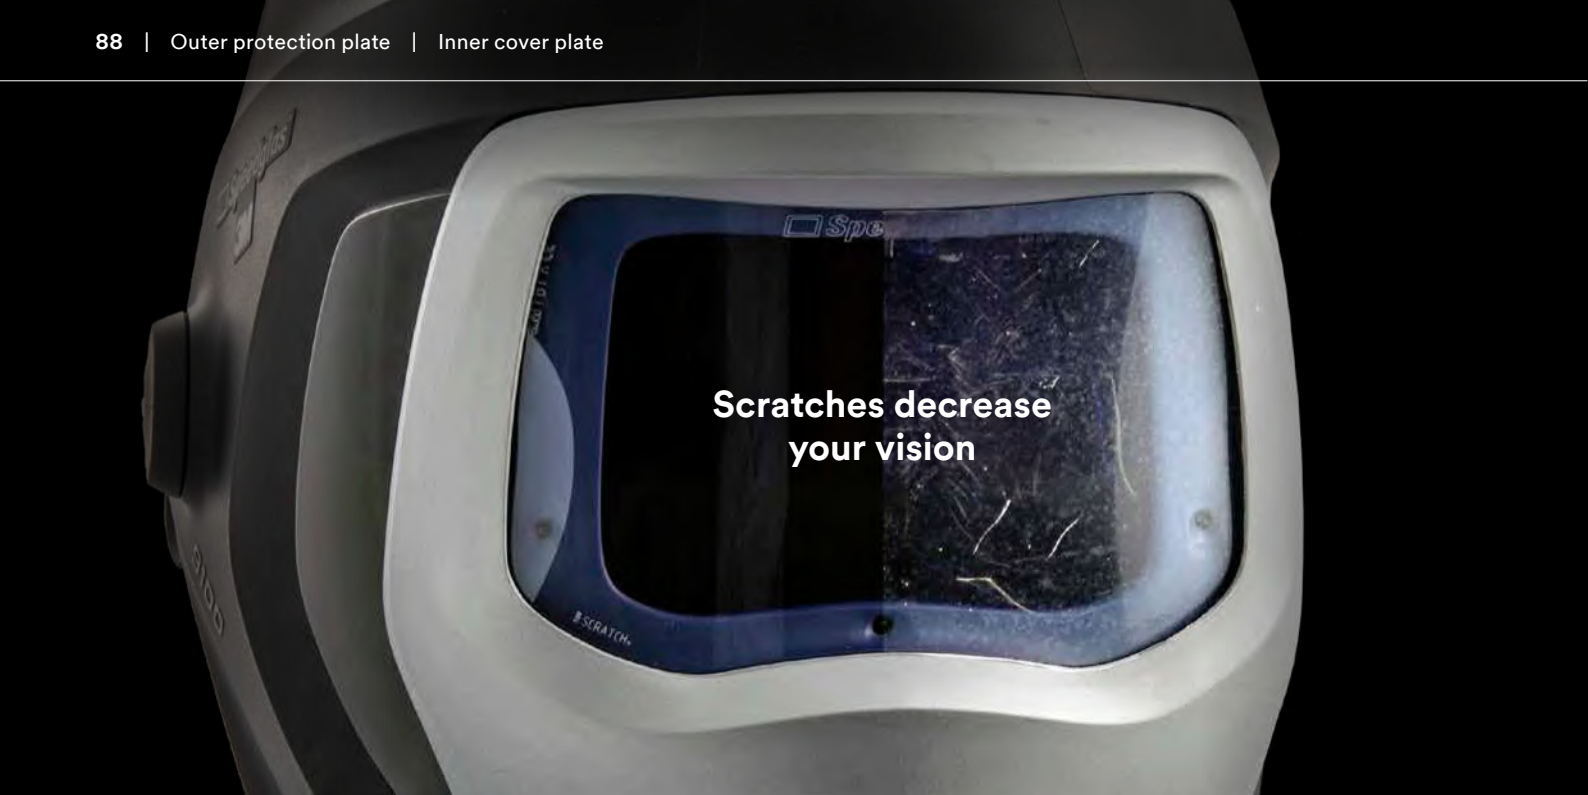

Maintenance basics are covered on pages 91 (filter and helmets) and 98 (3M™ Adflo™). For complete maintenance guidelines, refer to the User Instruction manual that came with your equipment.

Our app can help

The free 3M™ Connected Equipment app gives you immediate access to all manuals – including illustrated parts lists and maintenance procedures. It also has links to YouTube™ videos for the most common tasks, like replacing a protection plate/cover or face seal. You can even use the app as your maintenance log.

All 3M™ Speedglas™ Generation 5 helmets have support for the 3M™ Connected Equipment app.

As the outer protection plate becomes deeply pitted, scratched or too dirty to clean with soft cloth, it's probably time to replace it. Ensure you order the right protection plate/ cover to your welding filter:

1) Alternative neck protection available in leather (part no 16 40 05).

Time to upgrade your visibility?

Getting too close to your arc?

Start with the easiest solution first: replace your welding filter’s outer protection plates more frequently!

If you still can’t see the detail you need, try one of our magnifying lenses. They come in x1.0, x1,5, x2.0, x2,5 and x3.0 strengths. For details, see the Accessories and Spare Parts section for each helmet.

Want an even darker shade?

Welding at very high amperages can create such an intense weld pool that you may feel eye strain, even when using a dark shade selection. On the welding filter series 9000 and 100, you can replace the standard (clear) inner protection plate with either our +1 or +2 shade plates. For details, **see page 88**.

System	Component	Typically replaced	Notes
Welding filters	Outer protection plate	Once a week	Replace anytime the plate becomes deeply pitted, scratched or too dirty to clean with soft cloth or lens paper
Welding filters	Inner cover plate	Once a month	Regularly clean with a soft cloth and replace if any pits or scratches occur.
Welding helmets	Visor plate	Every two weeks	Replace more often if visibility is reduced.
Welding helmets	Sweatband	Once a month	Replace more often if sweatband becomes unhygienic.
Welding helmets with respirator	Face seal	At least every 2 months	Replace earlier in really dirty environments or whenever the seal becomes unhygienic.
Welding helmets with respirator	Breathing tube	If damaged, deformed or leaking any air	To extend the life of breathing tube, use a tube cover or a heavy-duty rubber breathing tube.

Important information. Note that higher-than-normal levels of pollutants, heat, and sparks will require more frequent replacements of components. Chart assumes minimum 4 hours usage per day. Ordering information for each series of welding helmet can be found in the After sales chapter, **page 86**.

Learn more about product maintenance from Speedglas YouTube channel! Scan the QR code or visit **[youtube.com/3MSpeedglas](https://www.youtube.com/3MSpeedglas)**

To optimise the useful life of your welding equipment and avoid the additional cost of replacement, regular maintenance is important. Replace all damaged parts immediately to help ensure intended degree of protection.

Below is a helpful overview; always read and follow User Instructions.

Before use

- Helmet and headband.** Inspect for cracks or any damaged parts. Replace if needed.
- Welding filter.** Check that the sensors are clean. Replace the battery if the low battery indicator flashes or if the indicators do not flash when the buttons are pressed.
- Protection plates.** Ensure that your welding filter is equipped with an outer protection plate and inner cover plate. To help provide the best possible vision, they should be clean and without scratches.
- Magnification.** If you can’t see the detail you need, try one of our magnifying lenses, available in x1.0, x1.5, x2.0, x2.5 and x3.0 strengths.
- Respiratory helmets: face seal.** If the face seal is damaged, there is a risk that contaminated air will get inside the helmet. Verify it’s in place and free from splits and tears.
- Respiratory helmets: breathing tube.** Confirm that the tube is undamaged and not leaking any air. To extend the life of the breathing tube, use a breathing tube cover or a heavy-duty breathing tube

After use

- Clean the helmet.** Wipe with a moist tissue or cloth, both inside and outside the helmet.
- Face seal and sweatband.** Remove for additional cleaning as needed and replace if they have splits or tears or whenever they become unhygienic.
- Protection plate/cover and visor plate.** Clean with a soft cloth and replace if any pits or scratches occur.
- Breathing tube.** Replace if damaged, deformed or leaking any air. If you suspect that the inside of the breathing tube is dirty, it must be changed. DO NOT rinse, immerse in water, or clean with solvents.
- Storage.** Store the helmet in a dry, clean area away from direct sunlight, high temperatures and solvents, as stated in the user instructions. Ideally use the bag that comes with the helmet or similar.

3M™ Adflo™ component	Typically replaced ¹⁾	Notes
 Prefilter	Once a week	Regular replacement of the prefilter extends the life of the particle filter.
 Particle filter	At least every month	Replace when particle filter indicator becomes red. Otherwise, replace whenever the battery operating time becomes too short, or when the low airflow alarm is triggered by a fully loaded filter. Note: Do NOT attempt to clean the particle filter with supplied air
 Gas filter	According to regulations at your work place	Smell and taste is not recommended as a measure for determining when to change gas filters.
 Odour filter	Any time you smell unpleasant odours	Note: odour filter is not required if a gas filter is used.
 Spark arrestor	As needed	Make sure that the spark arrestor is clean for proper function. Replace if deformed and no longer fitting well.

¹⁾ Important information. Note that higher-than-normal levels of pollutants, heat, and sparks will require more frequent replacement of components. Chart assumes minimum 4 hours usage per day. Ordering information for each series of welding helmet can be found in the After sales chapter, page 86.

Breathing tubes²⁾

The QRS (Quick Release Swivel) breathing tubes allow fast and easy connection. Most systems comes with the self-adjusting length for improved fit, made in polyurethane (83 40 16). As an alternative the high durability rubber tube (83 40 17) or the extra long breathing tube (83 40 19) is sold separately.

Breathing tubes

The QRS (Quick Release Swivel) breathing tubes allow fast and easy connection. Most systems come with the self-adjusting length for improved fit, made in polyurethane (83 40 16). As an alternative the high durability rubber tube (83 40 17) is sold separately.

Filters and accessories

1. Spark arrestor 2. Prefilter¹⁾ 3. Particle filter¹⁾ 4. Odour filter Not needed when you use gas filter. 5. Heavy-duty battery Extends the operation hours to 10–13 hours (7–9 hours with standard battery). 6. Gas filter A1B1E²⁾ 7. Gas filter A2²⁾ 8. Braces 9. Backpack

Air Supply

1. 3M™ Aircare™ Filtration Units (wall-mounted or stand alone) 2. Couplings and branch sets 3. Air supply tubes (7,5–30 m)

More information about Adflo accessories see page 99.

More information about air supply see page 100–101.

1) Included as standard when you order a complete respiratory protection system with welding helmet and air delivery unit; must always be used.
2) Gas filter must always be used together with a particle filter and we recommend to use a heavy-duty battery (sold separately: 83 76 31). In some configurations it is also required to use a breathing tube with silencer (non-QRS: 83 40 09), always verify approved combinations with your Safety Engineer or contact a certified Industrial Hygienist for advice.

A new system or an upgrade?

The 3M™ Speedglas™ Welding Helmet G5-01 fits both your 3M™ Adflo™ Powered Air Purifying Respirator as well as the 3M™ Versaflo™ Supplied Air Regulators¹⁾.

Increase your comfort

Braces

83 50 20

Backpack

BPK-01

Personalise your comfort when using the 3M™ Adflo™ respirator

Braces (83 50 20) attach to the Adflo leather belt for better weight distribution and stability.

Some welders prefer to wear the Backpack (BPK-01), which holds the PAPR flat against your back and can make it easier to move around some workspaces.

3M™ Speedglas™ Welding Helmets G5-01 headband

Tailor to fit your preferences

① Extra-large back pad

Delivered with an extra-large, head rest for enhanced comfort as standard and a smaller one as optional.

② Adjustment options

Adjust the distance and angle from your eyes to the clear visor and welding filter

③ New headband design

Upgraded, self-adjusting comfort paddles along your forehead.

3M™ Adflo™ Powered Air Purifying Respirator

Respirator without headtop – standard battery

Part No	Description
83 77 30	Adflo respirator with self-adjusting breathing tube QRS, breathing tube adapter, airflow indicator, prefilter, spark arrestor, particle filter, battery, belt and charger.

For gas filter configuration we recommend using the Adflo respirator with heavy-duty battery.

Respirator without headtop – heavy duty battery

Part No	Description
83 77 31	Adflo respirator with self-adjusting breathing tube QRS, breathing tube adapter, airflow indicator, prefilter, spark arrestor, particle filter, heavy-duty battery, belt and charger.

For gas filter configuration please add these items to above order: **83 72 42** for gas filter A1B1E1, or **83 75 42** for gas filter A2.

Standard battery

Don't get weighted down. A lightweight lithium-ion battery pack designed for the Adflo respirator.

- Run time 7–9 hours¹⁾
- Charging time 4 hours
- Compact and lightweight

Heavy-duty battery

Find your endurance. A high-capacity lithium-ion battery pack extends the operating hours of the respirator.

- Long run time 10–13 hours¹⁾
- Charging time 4–5 hours
- Compact and lightweight

3M™ Adflo™ Battery Charger Organizing Stand

The 6-position battery charger organizing stand for Adflo battery chargers provides the ability to charge six batteries at the same time. Saving both time and hassle. Compatible with Adflo NiMH batteries and Adflo Li-ion batteries. Flexible installation: either mount on wall or stand-alone.

Part No: 83 37 06

		83 76 31	Li-ion Battery Heavy-Duty.		

1) Expected operating times are when using a new, fully-charged battery, new particle filter and a standard airflow setting.

3M™ Versaflo™ Supplied Air Regulators

Versaflo supplied air regulator V-500

Part No	Description
V-500E	Flow controlled supplied air regulator, including belt. User adjustable airflow, from 170 to 305 l/m.

Versaflo supplied air regulator V-100

Part No	Description
V-100E	Air cooling supplied air regulator, including belt. Lets users cool the airflow by up to 28°C.

Versaflo supplied air regulator V-200

Part No	Description
V-200E	Air heating supplied air regulator, including belt. Lets users heat the airflow by up to 28°C.

3M™ Aircare™ Filtration Systems

To make the quality of the air supply breathable, oil aerosols, water vapour, particulates, and non-toxic, unpleasant odours must be removed to EN 12021 requirements. The 3M™ Aircare™ Filtration Systems ACU-3 (wall mount) and ACU-4 (floor mount) provide three-stage filtration for up to three users or two users plus an air tool.

- A Differential pressure indicator
- B Pressure regulator (lockable)
- C Pressure gauge
- D Pre-filter
- E Coalescing filter
- F Absorber filter with activated charcoal

16 80 11	Sweatband 9100MP-Lite, for TH3 level of protection pkg of 2 (not included in M-150).	52 70 00	Outer protection plate scratch resistant, pkg of 10.	57 04 95	Outer shield.
16 90 14	Safety helmet cover.	52 70 01	Outer protection plate extra scratch resistant, pkg of 10.	57 08 95	Inner shield.
16 90 15	Shroud.	52 70 70	Outer protection plate heat resistant, pkg of 10.	57 28 00	Welding helmet 9100MP, without welding filter.
17 10 20	Magnifying lens 1.0.	52 80 05	Inner cover plate for 9100V filter, pkg of 5. Plate marking 117×50.	59 28 00	Welding helmet 9100MP-Lite, without welding filter.
17 10 21	Magnifying lens 1.5.	52 80 15	Inner cover plate for 9100X filter, pkg of 5. Plate marking 117×61.	89 60 55	Safety helmet 9100MP, incl head suspension and sweatband.
17 10 22	Magnifying lens 2.0.	52 80 25	Inner cover plate for 9100XX/9100XXi filters, pkg of 5. Plate marking 117×77.	89 60 56	Bump cap 9100MP-Lite, incl head suspension and sweatband.
17 10 23	Magnifying lens 2.5.	53 10 00	Battery holder, pkg of 2.	79 01 01	Product storage bag.
17 10 24	Magnifying lens 3.0.	53 20 16	SideWindow cover plates.	M-350	Head suspension for 9100MP.
19 71 50	Flip-up mechanism.	53 42 00	Face seal.	X1P3	3M™ Peltor™ Earmuffs X1 (26 dB). ¹⁾
19 71 51	Pivot kit.	53 50 01	Helmet airflow deflector for 9100MP-Lite.	X2P3	3M™ Peltor™ Earmuffs X2 (30 dB). ¹⁾
42 20 00	Battery CR2032 Lithium 3V, pkg of 2.	53 62 00	Headband ratchet.	X3P3	3M™ Peltor™ Earmuffs X3 (32 dB). ¹⁾
50 00 05	Speedglas welding filter 9100V.			X4P3	3M™ Peltor™ Earmuffs X4 (32 dB). ¹⁾
50 00 15	Speedglas welding filter 9100X.			X5P3	3M™ Peltor™ Earmuffs X5 (36 dB). ¹⁾
50 00 25	Speedglas welding filter 9100XX.			Z3AF/2	Helmet assembly parts for Peltor X-series earmuffs, left and right.
50 00 26	Speedglas welding filter 9100XXi.				
52 30 00	Visor plate, standard, pkg of 5.				
52 30 01	Visor plate, anti-fog, pkg of 5.				

1) Please add assembly parts Z3AF/2 when ordering earmuffs for 9100MP and 9100MP-Lite welding helmets.

3M™ Versaflo™ M-Series Headtops for grinding

Spare parts & accessories

Part No	Description	Part No	Description	Part No	Description
16 80 10	Sweatband, fleecy cotton, pkg of 2.	BT-40 ¹⁾	Breathing tube, heavy-duty rubber, with QRS connection.	M-972	Flame resistant headtop cover.
83 40 16	Breathing tube, self-adjusting (52,5 to 85 cm), with QRS connection.	M-116	Airflow deflector.	M-976	Head, neck and shoulder cover.
83 40 17	Breathing tube, heavy-duty rubber, with QRS connection.	M-150	Head suspension.	X1P3	3M™ Peltor™ Earmuffs X1 (26 dB). ²⁾
83 40 18	Flame resistant breathing tube cover.	M-154	Forehead seal.	X2P3	3M™ Peltor™ Earmuffs X2 (30 dB). ²⁾
83 40 19	Breathing tube long QRS	M-316	Airflow deflector (M-307).	X3P3	3M™ Peltor™ Earmuffs X3 (32 dB). ²⁾
85 77 20	Versaflo helmet M-307 with Adflo powered air purifying respirator.	M-350	Head suspension (M-307).	X4P3	3M™ Peltor™ Earmuffs X4 (32 dB). ¹⁾
BT-20 S&L ¹⁾	Breathing tube, polyurethane (in two lengths), with QRS connection.	M-354	Forehead seal (M-307).	X5P3	3M™ Peltor™ Earmuffs X5 (36 dB). ¹⁾
BT-30 ¹⁾	Breathing tube, self-adjusting (52,5 to 85 cm), with QRS connection.	M-919	Visor frame buttons.	Z3AF/2	Helmet assembly parts for Peltor X-series earmuffs, left and right.
		M-920	Visor frame.	M-207	Faceshield M-207.
		M-921	Visor gasket.	M-307	Helmet M-307.
		M-925	Visor standard (uncoated), molten metal splash protection to EN166.	M-407	Helmet with shroud M-407.
		M-927	Visor coated.		
		M-928	Peel-off visor cover.		
		M-937	Flame resistant faceseal.		
		M-953	Ratchet.		
		M-956	Ratchet comfort pad.		
		M-960	Pivot kit.		

For powered air purifying respirator options, please see page 98–99. For supplied air regulator options, see page 100–101.

1) When the V-500E regulator is used with Versaflo headtops M-Series, the BT-Series breathing tubes must be used.
2) Please add assembly parts Z3AF/2 when ordering earmuffs for Versaflo Headtops M-Series.

3M™ Speedglas™ Welding Helmet Series G5-02

3M™ Welding Helmet G5-02

Part No	Description
62 11 20	Including curved welding filter, headband, cleaning wipe and storage bag.

Ready to experience the curved ADF?

Designed for high-end TIG welders, the G5-02 helmet literally sets a new world standard for precision ADF viewing. Be one of the first to experience 3M™ Speedglas™ Curved Glass Technology, order a complete helmet system.

Welding helmets – with 3M™ Safety Helmet H-701

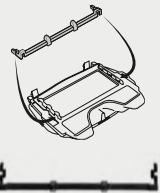

Part No	Description
58 36 15	With Speedglas welding filter 9100X, with rail and safety helmet (107×54 mm).
58 36 25	With Speedglas welding filter 9100XX (107×73 mm).
58 36 26	With Speedglas welding filter kit 9100XXi, incl welding filter (107×73 mm) and front cover 9100XXi.

Welding helmets – without safety helmet

Part No	Description
58 26 00	With QR rail, without welding filter.
58 26 15	With QR rail and Speedglas welding filter 9100X.
58 26 25	With QR rail and Speedglas welding filter 9100XX (107×54 mm).
58 26 26	With QR rail and Speedglas welding filter kit 9100XXi and rail, incl welding filter (107×73 mm) and front cover.

Alternative 3M™ Speedglas™ Welding Filters

Part No	Description
50 00 01	Passive filter kit 9100, shade 11 (110×90 mm).
50 00 05	Auto-darkening filter 9100V, variable shade 5, 8, 9–13 (93×45 mm).
50 00 15	Auto-darkening filter 9100X, variable shade 5, 8, 9–13 (107×54 mm).
50 00 25	Auto-darkening filter 9100XX, variable shade 5, 8, 9–13 (107×73 mm).
50 00 26	Auto-darkening filter 9100XXi variable shade 5, 8, 9–13 (107×73 mm).

Distance bar

To avoid scratches on the larger welding filters (9100X, 9100XX, 9100XXi) when raising the welding helmet, we recommend using this distance bar (included when you buy a complete helmet with these welding filters). Also sold as spare part.

Part No 53 11 00

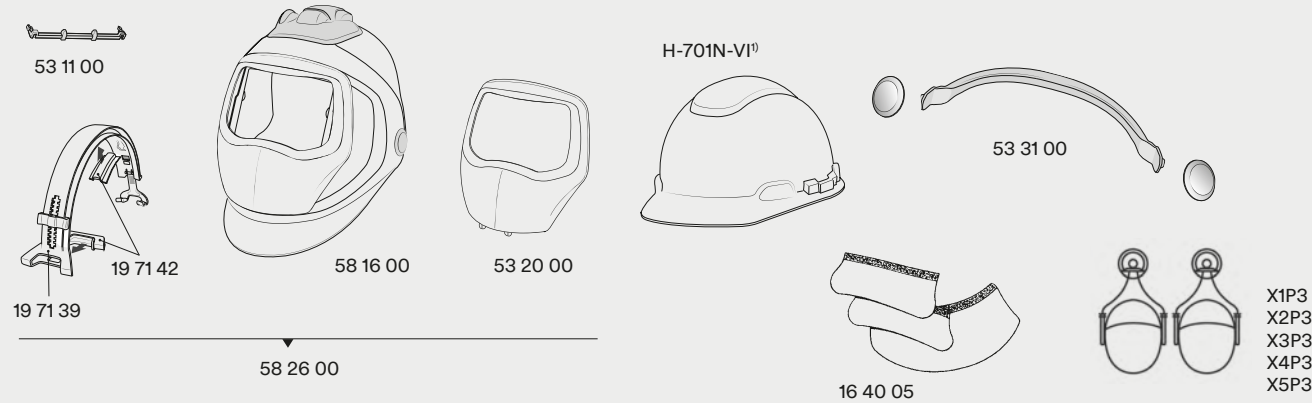

Earmuff bar

When using earmuffs, we recommend you to install this earmuff bar to widen the 9100-QR welding helmet.

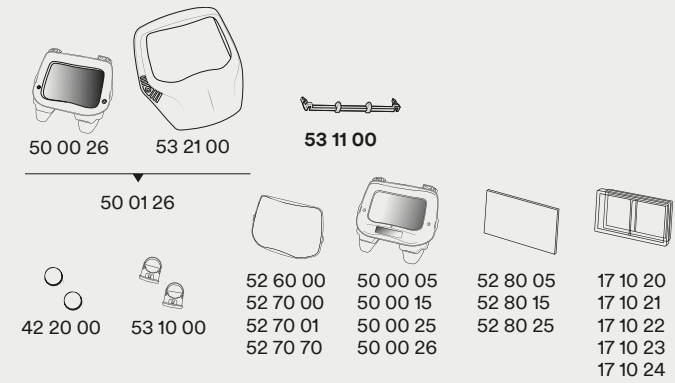

Sold as separate accessory.

3M™ Speedglas™ Welding Helmet 9100 FX-Air

Helmet systems with powered air

Part No	Description
54 77 00 ¹⁾	Without welding filter, with Adflo powered air purifying respirator.
54 77 26 ¹⁾	With Speedglas welding filter kit 9100XXi, incl welding filter (107×73 mm) and front cover, with Adflo powered air purifying respirator.

Helmet systems with supplied air

Part No	Description
54 88 00 ¹⁾	Without welding filter, with Versafla supplied air regulator V-500E.
Please note, supplied air regulators with heating or cooling (V-100/V-200) only as separate order (not as system), see page 100–101.	

Alternative 3M™ Speedglas™ Welding Filters

Part No	Description
50 00 01	Passive filter kit 9100 (110×90 mm), shade 11.
50 00 05	Auto-darkening filter 9100V (93×45 mm), variable shade 5, 8, 9–13.
50 00 15	Auto-darkening filter 9100X (107×54 mm), variable shade 5, 8, 9–13.
50 00 25	Auto-darkening filter 9100XX (107×73 mm), variable shade 5, 8, 9–13.
50 00 26	Auto-darkening filter 9100XXi (107×73 mm), variable shade 5, 8, 9–13.

Maintenance tips for 3M™ Speedglas™ Welding Helmet 9100 FX-Air

Subscribe to our YouTube channel to learn more about product features and maintenance. A few examples:

Scan QR-code or use this URL:
www.youtube.com/3MSpeedglas

It is important that the face seal is correctly mounted and fitted to provide the anticipated protection factor.

Is your clear visor not so clear anymore, after periods of frequent grinding? From our YouTube channel you will learn how to replace it.

If you need additional protection for your head, find out on our channel how to assemble the head cover for additional protection against sparks.

50 00 26	Auto-darkening filter 9100XXi variable shade 5, 8, 9–13 (107×73 mm).

Passive filters combined in flip-up helmets

With the 3M™ Speedglas™ Flip-up Welding Helmets, the side windows offer additional peripheral welding vision. Now also compatible with passive welding filters appropriate for long, continuous welds and less sensitive to humidity and heat.

Excellent low-cost options for large, 110 × 90 mm welding viewing area. And you can easily upgrade to a high performance Speedglas auto-darkening filter at any time.

Ongoing customer support

To help keep your equipment working as it should, and to ensure you get the most from your investment, our support team at 3M is able to offer assistance on several levels:

Care & Maintenance Posters

Guidance on the appropriate maintenance checks is provided in the User Instructions supplied with all new equipment. Our Care & Maintenance Posters make this information available on a day-to-day basis and are a strong visual reminder.

Welding Specialists

Based across your country and supporting our 3M distributor network, our welding specialists have a sound understanding of national health and safety laws coupled with years of experience in the welding market.

Helpline

3M has local helplines for any technical queries. For further details find your local contact information at www.3M.com.

All the support material can be downloaded and printed. Just visit: www.3M.com (select your country and then Speedglas brand).

⚠ WARNING

Product standards determine what type and level of protection is provided. Check the technical information and product markings to determine the product standard. This information should be considered but not in isolation when consulting your risk assessment. Always consider local regulation and requirements. The result of the risk assessment should determine if the PPE is an appropriate control. For more information see the user instructions or contact 3M for technical support.
